Introduction / Summary

IPB Insurance CLG (“the company” or “IPB”) has prepared this Solvency and Financial Condition Report (“SFCR”) to satisfy the public disclosure requirements under the Commission Delegated Regulation (EU) 2015/35 of the European Parliament supplementing Directive 2009/138/EC, known as Solvency II, which came into effect from 1 January 2016. This SFCR covers the business and performance of the company, its system of governance, risk profile, valuation for solvency purposes, and capital management. The ultimate responsibility for all of these matters lies with the company’s Board of Directors (“the Board”), with support from various governance and control functions that monitor and manage the operations of the business. This SFCR went through both an internal and external review and approval process, including Board approval as per the *EIOPA Guideline 37* and was subject to controls to ensure that the information contained herein is reliable, complete, and consistent with information and other reports submitted to the Central Bank of Ireland (“Central Bank”).

The company is a mutual non-life Insurance company established under the Companies Acts in 1926 and regulated by the Central Bank. The principal activity of the company continues to be the provision of insurance and risk management support to its Members and customers, both in the public and private sectors, with most of its underwriting risk concentrated in the Republic of Ireland. The company is 100% Irish owned and is a Standard & Poor’s A- stable rated insurer with excellent financial strength.

The company made a profit before tax of €89.6 million in 2023 (2022: Loss of €55.4 million). This increase in profit before tax is largely due to mark-to-market investment gains in 2023.

The company delivered an investment gain of €77.5 million compared to a loss of €88.5 million for the prior year which was ahead of the market weighted benchmarks.

The company delivered an underwriting profit of €12.1 million (2022: profit €33.1 million).

The company has in place a comprehensive set of terms of reference, policies and procedures supporting all aspects of its governance and control framework and appropriate to its nature, size, and complexity. The Board delegates authority to its sub-committees to complete separate programmes of work on its behalf whilst ensuring regular reporting with clear terms of reference. The company has also established the four key independent control functions required under the Corporate Governance Requirements for Insurance Undertakings 2015 and in accordance with Articles 44, 46, 47 and 48 of the Solvency II Directive – Risk Management, Compliance, Actuarial, and Internal Audit. These functions are responsible for providing oversight of and challenge to the business and for providing assurance to the Board in relation to the company’s control framework. Each of the independent functions have direct reporting lines to the Board, as well as to the relevant Board Committees.

The Risk Profile of the company is stable and is currently dominated by underwriting and market risk. The company has complied with the Solvency II Directive on an on-going basis throughout the year and the capital available to the company is of a very high quality, consisting wholly of retained earnings. The assets that comprise the available capital are invested in a very balanced investment portfolio with limited risk accepted within the parameters of the Board approved Risk Appetite Statement.

As at 31 December 2023, the company’s eligible own funds to cover the Solvency Capital Requirement (“SCR”) and Minimum Capital Requirement (“MCR”) stood at €747.4 million (2022: €686.8 million), which

represented a solvency ratio of 3.1 times the SCR (2022: 3.1 times). The company's SCR and MCR were €239.5 million and €64.4 million respectively (2022: €224 million and €60.9 million respectively). There was no breach of the SCR (and hence the MCR) over the reporting period.

A: Business and Performance

A.1 Business

The company is a mutual non-life insurance company limited by guarantee and established under the Companies Acts in Ireland in 1926. The company is a single entity and does not form part of a group. It is governed by the "Constitution of IPB Insurance CLG" together with corporate and regulatory legislation. The principal activity of the company continues to be the provision of insurance and risk management support to its Members and customers, both in the public and private sector, with most of its underwriting risk concentrated in the Republic of Ireland. Membership consists of Local Authorities, Education and Training Boards, Regional Assemblies, and the Health Service Executive. The company is 100% Irish owned and is a Standard & Poor's A- stable rated insurer with excellent financial strength. It is not leveraged, and it maintains large capital buffers accumulated from retained earnings. The company's current organisational structure is set out on [page 13](#).

The company's registered office and operating address is: 1 Grand Canal Square, Grand Canal Harbour, Dublin 2 D02 P820.

The Central Bank is responsible for the financial regulation of the company. The Central Bank's address is: Central Bank of Ireland, New Wapping Street, North Wall Quay, Dublin 1.

The company's external auditor is: KPMG, Chartered Accountants and Statutory Audit Firm, 1 Harbourmaster Place, IFSC, Dublin 1.

The company's financial year end is 31 December each year and it reports its results in EUR (Euro).

A.2 Underwriting Performance

The company delivered an underwriting profit of €12.1m (2022: €33.1m), a decrease of €21m on the previous year but €6.5m ahead of the budget of €5.6m. This result is primarily driven by lower-than-expected claims frequency across Casualty lines of business, and in particular Public Liability which forms a significant part of our overall portfolio. Additionally, strong profitable growth, some significant claims recoveries on prior year claims and better than expected development on prior underwriting years along with a prudent reinsurance programme, which protects our balance sheet from significant volatility, are the main drivers of another year of excellent underwriting performance.

As stakeholders of the business, it is important that Members are protected by having a mutual insurer that delivers a positive underwriting result on a consistent basis. Our continued focus on targeted and appropriate pricing is one of the essential components influencing the financial performance. This prudent pricing of Member and non-member business has again delivered a positive underwriting performance this year. Gross written premiums for the year were €172m, up 7% on the previous year (2022: €161m).

Claims incurred net of reinsurance amounted to €91m (2022: €70m).

Injury claim frequency in 2021 and 2022 moderated, as would have been expected, due to the impacts of the pandemic and reduced social mobility, however, some moderation was evident prior to the pandemic due to the cumulative impact of Government-led insurance reform measures. As the effect of the pandemic decreased in relevance, 2023 saw continued moderated injury claim frequency as ongoing insurance reform measures and the personal injuries guidelines, introduced in 2021, bed-in.

Factors influencing the reducing frequency trend pre-pandemic were:

- Cost of Insurance Working Group and Personal Injuries Commission.
- Media coverage of the compensation culture and a number of high-profile reports on opportunistic claims and the impact of insurance costs on business and society.
- Brexit and market capacity shrinkage, (frequently attributed to claims costs)
- Perception of growing intolerance of fraud at trial and media coverage of unsuccessful claimants.

During the pandemic:

- Restricted social mobility due to successive lockdowns.
- Closed legal practitioners, more difficulty in pursuing claims.
- Closed amenities.

Post pandemic:

The pre-existing impact of insurance reform measures continue to influence, and new moderating influences include:

- Greatly increased working from home.
- Reduced commuting and mobility.
- The introduction of the Personal Injuries Guidelines (“PIGs”) which greatly alter the economics of making a claim.

The PIAB (since renamed to the Injuries Resolution Board) annual report for 2022, released in December 2023, highlights claim volumes down 14% on 2021 and 41% on pre-pandemic 2019 levels. This trend is echoed in IPB’s injury claims data for 2022 and 2023. The impact of the personal injuries guidelines has been significant. Initial PIAB award reductions of 40% prompted a dramatic reduction in acceptances and threatened increased litigation, however, as the personal injuries guidelines mature in usage, acceptance rates have returned to pre-guideline levels. The most recent PIAB report indicates claim award moderation of 34% compared to the book of quantum.

Injury claim frequency moderation is characterised by a greater proportionate decrease in lesser value claims and the reported savings of the PIGs compared to the Book of Quantum, will wane as lesser value claims fall out of the system. Again, this trend is also apparent within IPB claims data.

Overall claim volumes registered by IPB in 2023 has increased 29% when compared to 2022 and 13% compared to 2019, the increase is due to weather related minor motor damage claims and increased personal accident claims flowing from significant increased penetration of the personal accident cover product.

Net commission income was €7m for the year (2022: €6.4m). Commission income is earned on reinsurance contracts entered with a panel of global reinsurers. Commission expenses are paid to brokers through whom we source some of our customers.

The following tables shows an analysis of the underwriting result by product and by location, compared to the prior year, as per the year-end financial statements:

Analysis of underwriting result by product	Fire and other				Total

A.3 Investment Performance

The company delivered an investment gain of €77.5 million compared to a loss of €88.5 million for the prior year which was ahead of the market weighted benchmarks by over two percent. Bond markets performed very strongly in 2023 as a result of falling inflation and expectations of future interest rate cuts. The average credit rating on these investments is very high at AA for government bonds and A- for corporate bonds. Equity markets also performed strongly in 2023 with mark-to-market gains of €10m and dividend income of €3.9m. Property produced the weakest returns of all asset classes for 2023 with higher yields and remote working affecting office capital values negatively.

The following tables show an analysis of the investment return compared to the prior year, as per the financial statements.

Analysis of net investment return	Investment income	Net realised	Net unrealised	FX	Investment expenses	Total investment return
		gains/(losses)	gains/(losses)	gains/(losses)

Total net investment return	18,727	(16,154)	(89,653)	(1,413)	(42)	(88,535)

The company has no gains / losses recognised directly in equity because all gains and losses are recognised through the Profit & Loss Account as opposed to through the Statement of Changes in Equity. The company does not engage in any securitisation.

Company assets are invested in highly rated investments in accordance with the “prudent person principle”. Investment decisions are made in the best interests of Members and other stakeholders. The fundamental objective is that all valid claims and expenses are paid as they fall due. In practice, assets are allocated into two notional portfolios which have different objectives – The matched portfolio and the risk portfolio. These objectives are discussed in more detail later in this Report.

A.4 Performance of other activities

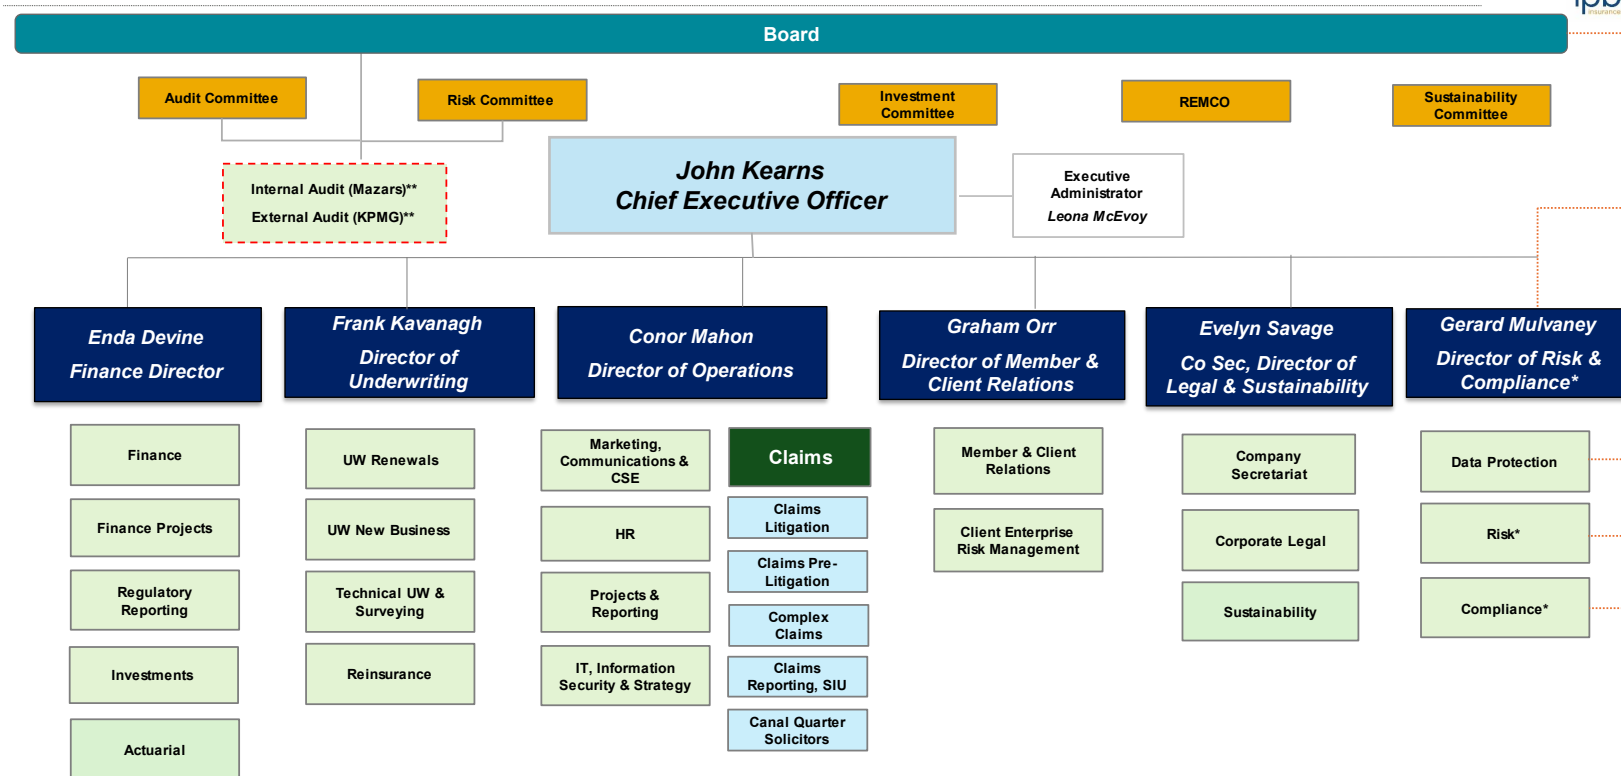

Operating expenses were up compared to the prior year. Total operating expenses amounted to €31 million for the year (2022: €29.8 million). The largest component of operating expenses related to staff costs.

A.5 Any other Information

An €18.3m Members’ commercial dividend was paid during the year which was 40% of the profit after tax for the 2021 financial year.

B: System of Governance

IPB INSURANCE ORGANISATION CHART

*The Company Secretary and the Control Functions of Risk and Compliance have direct regulatory reporting responsibilities to the Board and its Committees.
 ** Internal & External Audit have direct regulatory reporting to the Board and Audit Committee – also have a relationship with Risk, Compliance and Finance

B.1 General Information on the System of Governance

Role of the Board of Directors

The key role of the Board involves leadership and oversight of the Chief Executive Officer's (CEO) effective implementation of the business's strategy. The Chair, John Hogan, is responsible for leading the Board and ensuring the full participation of each Director. Constructive challenge by the Board to management is critical in providing assurance to the company's stakeholders that the business and its management team achieve appropriate governance standards while meeting the goals and objectives of the business.

Board of Directors Composition

The composition of the Board is consistent with regulatory requirements and responsive to the evolution of the company's business activities. The Board, following Central Bank consultation on its optimum composition, comprises of four group non-executive Directors (GNED) (John Hogan (who replaced George Jones as Chair during the year), John Clendennen, Ronan McMahon and Eddie Hoare (who was appointed during the year), four Independent Non-Executive Directors ("INED") (Caitriona Somers, Barbara Cotter, Joan Garahy and a new appointee during the year, Mary Cregan) and two Executive Directors, the CEO, John Kearns, and the Finance Director, Enda Devine. There is a clear division of responsibilities between

the Chair and the CEO. The Board has the strength and balance to ensure that all aspects of the business are addressed. The skills of the INEDs assist with the development of the business while the GNEDs ensure maintenance of the experience of the Membership's operations. The Executive Directors have a significant amount of technical, financial and insurance experience and they are tasked with delivering on the strategic objectives of the company and in doing so, oversee the day-to-day operations of the company. Each member of the Board participates in a comprehensive training and development programme to ensure continuous skills enhancement.

Board Committees

The company has in place a comprehensive set of terms of reference, policies and procedures supporting all aspects of its governance and control framework all of which is appropriate to its nature, size and complexity. The Board delegates, and in no way abrogates, authority to the following Board Committees to complete programmes of work on its behalf with clear terms of reference ensuring regular reporting to the Board:

- **A Risk Committee**, the main role of which includes responsibility to establish, document and devolve throughout the company a comprehensive risk management framework. The Risk Committee assists the Board with its oversight of risk and risk management. It meets at least four times per year and follows a structured approach that covers all key risk types within the business, including emerging and strategic risks. The Risk Committee is advised by subject matter experts on risk management, underwriting, claims, investments and compliance.
- **An Audit Committee**, the main role of which includes responsibility for maintaining oversight of the company's financial reporting, internal controls, audit processes and processes for monitoring legal and regulatory compliance. The Audit Committee also reviews the escalation process for employees in accordance with the company's Speak Up Policy.
- **An Investment Committee**, the main role of which includes responsibility for ensuring discharge by the Board of its oversight responsibilities in respect of the conduct of the company's investment management operations within approved investment policy and risk parameters. The Investment Committee also monitors the compliance of the company's investment activities with legislative provisions and regulatory requirements.
- **A Remuneration and Nomination Committee**, the main role of which includes responsibility for recommending succession planning for the Board and Management for Board approval. This includes overseeing the fitness and probity process associated with the appointment or removal of Board members and any head of control function by conducting an annual review of their compliance with requisite standards. The Remuneration and Nomination Committee is also responsible for Board recommendation of the company's Remuneration Policy, non-executive Director fee structures, and the remuneration of Executive Directors and individuals remunerated per criteria specified in its Terms of Reference.
- **A Sustainability Committee**, which includes responsibility for setting tone and developing the Company's sustainability ambitions and strategy whilst ensuring that the Company's Sustainability Strategy has a balanced focus on Environmental, Social and Governance aspects.

Independent Control Functions

The company has also established the four key independent control functions required under the Corporate Governance Requirements for Insurance Undertakings 2015 and in accordance with Articles 44, 46, 47 and 48 of the Solvency II Directive – Risk Management, Compliance, Actuarial and Internal Audit. These functions are responsible for providing oversight of and challenge to the business and for providing assurance to the Board in relation to the company's control framework. Each of the independent functions

have direct reporting lines to the Board, as well as the relevant Board Committees. These functions are discussed in more detail later in this report.

Remuneration, Employee Benefits and Practices

The company's Remuneration Policy is underpinned by a philosophy of providing employees with appropriate remuneration and incentives to encourage high performance and to ensure that they are, in a fair and responsible manner, rewarded for their individual contributions which are aligned to the success of the company while also ensuring that the principles of sound, prudent risk management are fully reflected. Excessive risk taking is neither encouraged nor rewarded, having regard to IPB's mutual status and value creation for IPB's stakeholders. Remuneration practices as set out in the Remuneration Policy are aligned with IPB's strategic direction, strategy and stakeholders' interests and are consistent with a reasonable assessment of its financial situation and prospects.

The company places significant strategic importance on Diversity and Inclusion (D&I) and it is central to our overall company strategy and objectives. We recognise the importance of embedding diversity and inclusion as a core part of our ways of working and thinking – the benefits associated with nurturing a diverse and inclusive culture are clear and we are committed to our own journey and development in this respect.

We have adopted a clear D&I strategy that sets out our diversity priorities in respect of Gender Balance and Pay Gap, Diversity of Thought, Under-represented groups, and Generational Diversity (age and tenure). We have also defined our strategic priorities in respect of inclusion to include Fairness and Respect, Safety and Openness, and Empowerment and Growth. Together, these priority areas are designed to drive an increased sense of Value and Belonging which is central to ensuring that we have the right culture in place – one which has diversity and inclusion as key building blocks.

In addition, the company places significant strategic importance on Sustainability and has a clear and widely communicated Sustainability Strategy with clear measures of success and targets for the coming three years.

In setting objectives at a company level, a balanced scorecard approach is adopted. Objectives are set in respect of Financial performance, Member & Customer, Strategy & Process and People & Culture. This balanced scorecard approach ensures that there is a rounded assessment of the performance of the company reflecting all key strategic considerations and measures of success. This balanced scorecard approach is reflected in individual performance assessments also which further underpins our commitment to ensuring that our remuneration practices neither encourage nor reward excessive risk taking.

The key principles underpinning IPB's Remuneration Policy are:

- To reflect IPB's commitment to compliance with applicable legal and regulatory requirements, including but not limited to the Corporate Governance Requirements for Insurance Undertakings 2015, the Central Bank of Ireland's Guidelines on Variable Remuneration Arrangements for Sales Staff issued in 2014, the EIOPA Guidelines on the System of Governance, the Solvency II Delegated Regulation (EU) 2015/35, the EIOPA Opinion on the Supervision of Remuneration Principles in the Insurance and Reinsurance Sector and the Central Bank's Guidance for (Re)Insurance Undertakings on Climate Change Risk.

- In addition, the Remuneration Policy and associated practices are aligned with the Company's overall strategy, risk profile, objectives, risk management practices and long-term interests of all stakeholders. This includes our commitment to sustainability and to the management of sustainability risks, including climate change, to our business in the medium and long term. The Policy and framework are based on Company Objectives which are agreed by the Board on an annual basis and reflect our long-term strategic priorities, our purpose, and a commitment to our culture, values, and behaviours.
- To create an integrated IPB Remuneration and Benefits Framework that is consistent with IPB's remuneration philosophy and delivers appropriate remuneration packages, based on annual reviews and approvals by the Committee and the Board of base pay benchmark setting, total compensation packages to include performance bonus payments and benefits packages and ad hoc increases and payments arising per risk appetite and effected by the appropriate governance in line with IPB's approval processes. IPB ensures internal equity and market competitiveness through periodic participation in external market reviews and benchmarking exercises with support from suitably qualified and independent external advisors as identified by and appointed by the Committee and the Board.
- To support IPB in retaining, developing, motivating, and attracting appropriately skilled employees in a competitive market through the delivery of competitive remuneration packages.
- To give effect to the principle of rewarding those who contribute most in their role and in supporting realisation of the Company objectives through a responsive and effective remuneration framework that recognises enhanced contribution.
- To support IPB employees in creating sustainable results in the interests of all stakeholders and clearly linking the interests of our key stakeholders and employees and reflecting alignment to the Company's Sustainability Strategy and objectives in the areas of environmental, social, and governance.
- To support the Committee and the Board through their annual cycles of work, ensuring that periodic reviews are performed to inform engagement by their appointed independent advisors in providing independent and objective advice to support their decision making.

The company provides employees, including Executive Directors, with a range of benefits including income protection and death in service benefits. Employees are also provided with health insurance contributions and contributions payable into the company's defined contribution pension plans based on percentage of salary, to which they can also contribute to suit their circumstances.

Share options or shares do not form part of the available employee benefits however the company operates an annual bonus plan for employees payable in certain circumstances subject to the assessment of both individual and company performance. The focus of the company's approach to variable remuneration, which is secondary in terms of quantum and certainty of availability relative to fixed remuneration, is on ensuring sound and effective risk management and avoidance of potential perception or encouragement of excessive risk taking. This is achieved through framing eligibility to participate on satisfactory company and individual performance, inclusion of financial and non-financial measures and with submission of the company performance objectives against which overall performance is measured and evaluated to the Remuneration Committee and the Board for annual review and approval.

A comprehensive Learning and Development framework, supported by educational assistance and comprising internal and external training and leadership development, is available to employees. A wide range of additional, non-financial, benefits are also provided by the company to employees to ensure that the employee value proposition is both compelling and in line with the wider market and supports our aim of retaining and attracting employees with the necessary skills, capabilities, and experience to positively contribute to realising our shared strategic objectives.

The company, through the Remuneration and Nomination Committee of the Board of Directors, continually reviews the Remuneration and Benefits Framework in place to ensure that it is appropriate in the context of all market, regulatory, and compliance requirements.

Material Transactions with Members during the reporting period

The company historically issued a number of loans to local authorities for the purpose of developing local community initiatives (including local authority premises, roads and amenities). The company ceased providing these loans with effect from 2009, therefore there were no loan advances made to local authorities during the year. Loan capital repayments and interest payments made by the local authorities during the year amounted to €1.9 million (2022: €2.1 million). Loan balances outstanding at year end amounted to €7.8 million (2022: €9.7 million).

B.2 “Fit and Proper” and Individual Accountability Framework requirements

The company has always been committed to ensuring its employees are of the highest calibre. The company’s Fitness & Probity & Minimum Competency Policy illustrates its commitment to adherence to legal and regulatory requirements in engaging personnel and reinforces the philosophy of ensuring that all employees perform their duties with integrity and a strong sense of ethical responsibility.

Its provisions apply to any employee, non-employee such as Directors, candidates, temporary staff, contractors or third-party service providers of the company who perform duties that are considered, by the Central Bank to involve either a Controlled Function (“CF”) or a Pre-approval Controlled Function (“PCF”). Its provisions apply from the beginning of the recruitment process and due regard to them must be considered as mandatory during any recruitment of persons performing duties involving a CF or PCF, and the application of the Fitness & Probity (“F&P”) Standards and the Minimum Competency Code and Regulations 2017 (hereafter “the F&P regulatory requirements”) remain applicable and must be maintained throughout their employment with the company.

Standards

In order to meet the F&P regulatory requirements, the company does not allow a person to perform duties involving a CF or a PCF, unless satisfied, on reasonable grounds, that they meet the Central Bank Standards. As an employer, the company is responsible for ensuring that each of its CF or PCF personnel meets the F&P regulatory requirements, on entry to the financial services industry and throughout their career.

The company is satisfied of its ability to judge whether an individual has the competence, experience and ability to understand the technical requirements of the business, the inherent risks and the management processes required to conduct the operations of the company effectively. Whereas common standards of probity apply regardless of the size or activity of the company, the competence requirements will vary to reflect the nature of the post and the size and activity of the company and the applicable approach ensures that the company undertakes necessary due diligence to ensure satisfaction of the F&P regulatory

requirements. In meeting the F&P regulatory requirements, a person performing duties involving a PCF or a CF role in the company must be:

- Competent and capable;
- Honest and ethical and act with integrity; and
- Financially sound.

The company undertakes a number of procedures to ensure the above requirements are met and to ensure compliance with the F&P regulatory requirements and the company's F&P Policy. Such procedures include the following:

Heads of Department

Heads of business departments within the company have overall responsibility for ensuring that all employees in their respective departments are aware of and adhere to the company's F&P Policy and to provide relevant information to the Human Resources Department and the Compliance Department as requested in relation to compliance with the F&P Policy.

Compliance Department

The Compliance Department ensure that the F&P Policy is available to all employees on the compliance page on the company's intranet and that education and training in relation to the F&P Policy is provided as required. In addition, the Compliance Department will review compliance with the F&P Policy as part of the overall compliance monitoring programme and ensure adherence to regulatory requirements.

Human Resources Department

The Human Resources Department is responsible for the implementation and maintenance of the company's Recruitment and Selection Policy which sets out the process for the recruitment of internal and external candidates to the company. The Recruitment & Selection Policy sets out the due diligence to be performed when recruiting for PCF and CF roles by management and HR.

In addition, the Human Resources Department is responsible for the maintenance of the internal registers related to F&P. The F&P Register must record all PCF and CF roles, both present and past. These registers are maintained on the Compliance Module of the Company's HR system.

The Human Resources Department must ensure that the contract of employment for all new hires and appointees (whether PCF or otherwise) provides that the offer is subject to the necessary pre-employment fitness and probity screening and that for PCF roles, the offer is subject to and effective only on receipt of the Central Bank's prior approval in writing of the appointment of the person to perform the function.

Company Secretariat

The Company Secretariat Department is responsible, in conjunction with the Directors themselves, for ensuring INEDs and GNEDs are in compliance with the F&P Policy and the relevant regulatory requirements.

Remuneration and Nomination Committee

In accordance with the Terms of Reference of the Remuneration and Nomination Committee, the proposed arrangements particular to all employees categorised as PCF and/or CF1 and remunerated at defined levels must be presented to the Remuneration and Nomination Committee for approval and to the Board for noting before they commence employment with the company.

Due Diligence

The company is required to undertake due diligence to ensure that the F&P Standards are met. The Recruitment & Selection Policy sets out the due diligence to be performed when recruiting all staff members including PCF and CF role holders. This due diligence exercise is also carried out on an annual basis for all PCF and selected CF role holders to ensure ongoing compliance with the company's F&P Standards.

In the event that any material items are identified during the due diligence process this will be duly addressed and appropriately actioned. The company may engage with an external provider to assist with conducting due diligence.

Offers of employment are subject to full compliance being met by the candidate by checking F&P regulatory requirements, references, professional memberships and qualification, and court judgements.

This checking process is conducted by an external provider on behalf of the company. This service provides an independent, objective check in relation to candidates.

Outsourced Functions

Pre-approved Control Functions (PCF)

The company requires that all persons performing duties involving a PCF role on an outsourced basis are compliant with the F&P regulatory requirements.

Where a PCF role is outsourced to an 'unregulated entity', the company will obtain the Central Bank's approval for the individual, who will perform the duties, prior to their appointment.

Control Functions

Where performance of duties involving a CF role is outsourced to an 'unregulated entity', the company requires the unregulated entity to be able to identify the individuals who perform such duties, and to assess whether they are compliant with the F&P regulatory requirements and obtain agreement to abide by them.

The company requires an outsourced unregulated entity performing a CF role on its behalf to furnish the company with confirmation of all F&P requirements (including sample documentation as to how the compliance is adhered to for each person) and to provide written confirmation that the individuals performing the CF have agreed to abide by the F&P regulatory requirements.

Ongoing Nature of Fitness and Probity requirements

F&P requirements are relevant and must be adhered to for the duration of an individual's employment with the company. On an annual basis, the company requires all relevant employees to complete a F&P declaration and confirmation so that any material changes to an employees F&P status can be communicated to the company. All F&P declarations and confirmations are submitted to HR for retention on the employees' files.

Individual Accountability Framework

The Central Bank (Individual Accountability Framework) Act 2023 was partially commenced in 2023. Both the Common Conduct Standards, which are a set of expected standards of conduct which apply to all control function roles in the company, and the Additional Conduct Standards which apply to its senior executives, applied from 29th December 2023. Enhancements to the previously existing Fitness & Probity Regime also became effective in 2023. The company established a project team which implemented these new requirements prior to the 29th December 2023 effective date. This project team is now working on the steps necessary to ensure compliance with the requirements of the Senior Executive Accountability Regime (SEAR) which have an effective date of 1st July 2024.

B.3 Risk Management System including the Own Risk and Solvency Assessment

Risk Management Structure

Risk management is central to safeguarding the promise that the company makes to its policyholders and Members and in the interests of all stakeholders, risk management seeks to:

- Protect the company's operations by promoting a sound culture of risk awareness as well as disciplined and informed risk taking.
- Protect the company's strong capital base by monitoring to ensure that risks taken are not beyond the company's risk appetite.
- Support decision making processes by providing consistent, reliable and timely risk information.

The Board is responsible for ensuring that risk is effectively managed by those involved in running the company on a day-to-day basis. The Board establishes prudent and effective controls to manage risk via the Risk Framework and sets the company's appetite for risk via the Risk Appetite Statement.

The Risk Committee assists the Board with its oversight of risk and risk management. The Risk Committee is advised by subject matter experts on risk management, underwriting, claims, investments and compliance.

Risk management is core to all business activities and staff are guided by documented policies and procedures, underpinned by an active and embedded risk management function, intranet, fora and training.

The Management Risk Forum is a Committee of the Leadership Team of IPB with responsibility for supporting the Risk Function in risk identification, measurement, monitoring, management and reporting on material current and emerging risks within the Company. This includes supporting the Director of Risk & Compliance who has distinct responsibility for the risk management function and for maintaining and monitoring the effectiveness of IPB's risk management system.

The Risk Framework

The Risk Framework describes the company's system to identify, measure, monitor, manage and report on risk in the business. It ensures that risk management is aligned with the company's strategic objectives and it is guided by seven key principles. The Risk Framework continues to be enhanced through evolving our risk identification, assessment and management by proactively monitoring and mitigating the threats and opportunities associated with the environmental, social and governance issues facing the company as well as our stakeholders. Implementation of the Risk Framework relies on a system of integrated risk management tools that promote a culture of risk management throughout the company.

The Board articulates risk appetite in order to ensure the solvency of the company at all times. Risk appetite is ultimately expressed in terms of detailed operating limits that guide the day-to-day activities of those entrusted to run the business. This enables the company to pursue its strategic objectives while limiting risk in a transparent and structured manner. All risks are monitored regularly, and certain risk types are monitored daily. Procedures are in place to reduce risk levels should operating limits be threatened, and a system of intermediate warning points is used to ensure that remedial action can be taken long before a breach is threatened as shown below:

Within Risk Appetite Status

The company is normally expected to operate within Risk Appetite.

Risk Appetite Proximity Warning

A Risk Appetite Proximity Warning indicates that a Risk Appetite Alert is threatened and corrective action is required.

In the event of a Risk Appetite Proximity Warning the Director of Risk & Compliance and the relevant business area shall take appropriate immediate steps to return the company to risk appetite. The Director of Risk & Compliance shall inform the CEO without undue delay. The CEO shall decide on the need for further escalation.

Risk Appetite Alert

A Risk Appetite Alert indicates that a Risk Appetite Limit breach is threatened and swift and decisive corrective action is required.

In the event of a Risk Appetite Alert the Director of Risk & Compliance and the relevant business area shall take the appropriate immediate steps to return the company to risk appetite. The Director of Risk & Compliance shall consider engaging the company's Incident and Error Management Policy. The Director of Risk & Compliance must inform the Risk Committee and any other relevant internal stakeholder without undue delay. The Risk Committee shall agree on necessary steps to restore appetite and consider further escalation to the Board.

Risk Appetite Limit Breach

A Risk Appetite Limit breach is serious and requires prompt action at Board level.

In the event of a Risk Appetite Limit breach the Director of Risk & Compliance must engage the company's Incident and Error Management Policy informing the Board without undue delay. The Board shall be

briefed and furnished with a recommended plan to return to Risk Appetite. The details of the breach and the planned actions to remedy the breach must be communicated to the Central Bank by the Board promptly in writing.

The Risk Committee and the Board are regularly and at least annually informed by a comprehensive Risk Report and subject experts from relevant areas of the company. The Risk Report covers all risk types and includes detailed risk metrics and other data on key risk exposures. It also captures detailed information at the individual risk level. A dynamic Operational Risk Register is the key tool in the management of operational risk. The risk management function engages with staff at all levels to ensure a detailed understanding of the various operational risks to which the company is exposed. The management of risk is further facilitated by a robust incident and error management policy promoting the prompt reporting and root cause analysis of incidents and errors.

Risk and other company policies define the formal risk management and risk control requirements of the company. The effectiveness of policies and key controls is regularly reviewed and tested.

Own Risk and Solvency Assessment (ORSA)

The ORSA is the entirety of the processes employed to identify, measure, monitor, manage, and report the material risks that the company faces, or may face. It expresses overall solvency needs in quantitative terms where possible, complemented by a qualitative description of the material risks.

The ORSA determines the overall capital necessary to achieve the strategic objectives of the company under a range of scenarios, including ensuring that solvency needs are met at all times. It also considers deviations from the assumptions underlying the SCR calculation.

The scope of the ORSA extends beyond regulatory capital requirements. The scope of the ORSA includes an assessment of:

- Overall solvency needs given the risk profile, risk appetite and strategic objectives
- Continuous compliance with capital requirements
- The significance with which the risk profile deviates from the Capital Model.

The ORSA shall be conducted in a manner that is proportional to the nature, scale and complexity of the risks to which the company is exposed. The ORSA process is conducted throughout the year on an annual cycle and relates to a 12-month period. Any material change to the business strategy also triggers an interim ORSA.

The Company relies on the Solvency II standard formula Solvency Capital Requirement (SCR) as its key risk and solvency measure. Therefore, there is a dependency on the appropriateness of the SCR to model the risk profile of the Company and in terms of input to strategic decision making. The appropriateness of the Standard Formula is assessed on a as part of the annual Own Risk and Solvency Assessment (ORSA) process.

On an annual basis IPB considers, and where possible tests, the materiality and appropriateness of the underlying assumptions and parameters of the SCR relative to the IPB business model. Key relevant risks deemed to fall outside the standard formula include catastrophe risk (flood and freeze), sovereign default risk, reputational, strategic, inflation and liquidity risk, all of which are tested via specific stress tests. Overall those risks outside the standard formula are deemed to be adequately addressed by separate

stress and scenario testing as well as qualitative measures. In addition, IPB stressed a number of the key calibrations of the SCR. The results of these stresses did not highlight any particular issues in terms of appropriateness for IPB.

B.4 Internal Control System

Description of Internal Control System

The Board is responsible for the company's internal controls system and its effectiveness. The system is designed to manage rather than eliminate the risk of failure to achieve business objectives and can provide only reasonable and not absolute assurance against material misstatement and/or loss. In accordance with the Central Bank's Corporate Governance Requirements for Insurance Undertakings 2015, the Board confirms that there is an on-going and regularly reviewed process for identifying, evaluating and managing any significant risks faced by the company. The key risk management and internal control layers that provide strong assurance to the Board include:

- Board Committees (as previously mentioned).
- An **internal audit function** and internal control framework which includes senior management whose leading role is to identify, keep under review and manage significant internal control risks facing the company.
- Underpinning all aspects of the business is a robust **risk management function** that oversees a risk management framework which includes the operation of approved risk management policies in the areas of underwriting, reinsurance, claims reserving and investments.
- A robust **compliance function** that oversees compliance and a regulatory governance framework providing assurance that the company operates in a transparent, controlled and compliant manner.
- A **legal function** that identifies and manages legal risks, providing legal advice and assistance across all business units and promotes the value of in-house legal services.
- A comprehensive system of **functional level controls** that are overseen by the various heads of functions including, inter alia, financial controls incorporating budgeting, periodic financial reporting and variance analysis.
- **Operational controls** such as physical access controls, IT controls, policies and procedures, four eye reviews, segregation of duties and authorisation limits.

All the above layers are reinforced by skilled and experienced management and employees who operate within an organisation structure of clearly defined lines of responsibility and authority.

The various layers of governance and control functions help to ensure that risks applicable to the company are identified and appropriately managed and internal controls are in place and are operating effectively. Supporting these layers of oversight are a number of internal controls that are pervasive across the organisation.

Description of how the compliance function is implemented.

Position within IPB Insurance

The compliance function is led by the Head of Compliance. The Head of Compliance is responsible for the compliance function and reports to the Director of Risk & Compliance with additional reporting lines directly to the CEO and the Board. The role of the Head of Compliance includes both the management of regulatory matters and the oversight of the implementation of relevant legislation by Management as required within the business. This is with the co-operation and strong participation of Management within

that process particularly with respect to the day-to-day operational requirements which are the responsibility of Management.

The Head of Compliance is an invitee to the Board, Audit Committee, Risk Committee, Investment Committee and the Remuneration and Nomination Committee meetings, as required. The Head of Compliance retains direct access to the Board should the need arise.

Roles & Responsibilities

The role of the compliance function is to provide sufficient assurances to the Board to enable it and its members to discharge its statutory duties to ensure compliance with relevant obligations. The compliance function reports to the Board via the Compliance Report. IPB has a Compliance Management Policy and Framework in place and its fundamental building block is a strong compliance culture, based on support and commitment from the Board and Management. The compliance function implements the Framework through the following key high-level activities:

- Assurance
 - Identification, measurement and assessment of compliance risk
 - Review of new and emerging regulatory risks
- Oversight
 - Monitoring, testing and reporting on compliance risks
- Support
 - Provision of Compliance advice and guidance to management and the Board
 - Compliance Training
- Regulatory Relationship Management

B.5 Internal Audit Function

Description of how the internal audit function is implemented.

Position within IPB Insurance

The role of the internal audit function is to provide independent, objective assurance in relation to the effectiveness of the company's internal control system. IPB had outsourced the role of internal audit to an independent third party, Mazars, to carry out the internal audit role.

The company's internal audit function's primary reporting responsibility is to the Chair of the Audit Committee. They also report directly to the CEO and/or Audit Committee on findings in respect of the above or other material considerations which may come to light. In addition, it may address such issues with the appropriate level of senior management and will have direct access to the Board Chair. It also engages with the Director of Risk & Compliance as relationship manager for this outsourced function with a view to ensuring that the function operates effectively within the company and is supported by Management.

Roles & Responsibilities

The primary role of the internal audit function is to ensure that the internal audit process is performed for the company in an efficient and effective manner. The internal audit functions are carried out using a risk-based approach, and address:

- *Compliance* – adherence to legislation, as well as to the company’s established policies, standards, and procedures.
- *Operational* - the quality of formal policies, standards, and procedures, and the quality of management, efficiency of operations, the design and maintenance or the adequacy of procedures and internal controls.
- *Integrity* – systems integrity and soundness, including design and implementation, fraud, monitoring of employee activities, and the reliability and integrity of financial matters.
- *Safeguard of Assets* – reasonable assurance regarding prevention, timely detection of unauthorised acquisition, use or disposition of the company’s assets.

Description of how its independence and objectivity is maintained.

As a role involving performance of a control function, the internal audit function operates independently of the business units of the company. The internal audit function will be given independence and sufficient authority and resources to enable it to carry out its tasks in an effective manner.

If the internal audit function concludes that its independence and/or authority has been compromised, these concerns should be brought to the attention of the CEO and/or the Board.

The Audit Committee carries out an assessment of the independence of the internal audit function on an annual basis.

B.6 Actuarial Function

Description of how the actuarial function is implemented.

Position within IPB Insurance

The actuarial function is led by the Head of Actuarial Function (“HoAF”) which is performed on an outsourced basis and is supported by an actuarial team.

The HoAF is responsible for the effective delivery of the actuarial function and reports to the Finance Director with additional reporting lines directly to the CEO and Board to ensure independence. The HoAF role includes provision of regulatory related material (required actuarial reports and supporting analysis) and other day-to-day tasks around pricing and general reserve management.

The HoAF is an invitee to the Board, Audit Committee and the Risk Committee, as required. The HoAF retains direct access to the Board should the need arise.

The actuarial function operates with independence in the assessment of the reserves and has access to all information required in the performance of this function.

Roles & Responsibilities

The main role of the actuarial function is to provide required regulatory assessments for the company, including an opinion on the technical provisions of the company, in the form of the Actuarial Opinion on Technical Provisions accompanied by the Actuarial Report on Technical Provisions. Other statutory opinions provided annually include the Actuarial Opinion on the ORSA process, the Actuarial Opinion on Overall Underwriting Policy and the Actuarial Opinion on the Adequacy of Reinsurance Arrangements.

The actuarial function provides quantitative information required for the ORSA, including assessments of the SCR under forward looking scenarios and stress testing. Other input includes contributing to the identification and assessment of risks to which the company is exposed.

In addition, the actuarial function conducts many day-to-day tasks for the company, including providing independent pricing reviews, support in reinsurance renewals and calculation of the technical provisions on a quarterly basis.

Potential conflicts of interest between the responsibilities specified under Solvency II regulation, and other day-to-day activities have been addressed by:

- Personal performance of HoAF is not based on measures that conflict with the independence of opinions.
- The remuneration of the actuarial function is not dependant on company performance.
- The HoAF does not have reporting lines to Underwriting or Reinsurance.
- The HoAF has day to day reporting lines to the Finance Director, CEO and overall to the Board with the prerogative to raise issues directly with the Board if required.
- The HoAF does not have direct responsibility for premium rates or reinsurance purchase.
- All pricing / reinsurance decisions are subject to approval by Committees and the Board.

B.7 Outsourcing

The Board recognises that the accountability of the Directors and Management of IPB cannot be delegated to the entities providing the outsourced facilities. Moreover, the Board is aware that while the outsourcing of certain activities can create a number of benefits to IPB, there are a number of risks attached that need to be managed effectively. Accordingly, IPB has in place a comprehensive Vendor Management Framework and Policy, that has been approved by the Board, as well as firmly established oversight procedures.

IPB outsources some activities to third parties, the critical outsourcing services provided are as follows;

Description of critical outsourced service	Country of Vendor Supplier
Actuarial Services	Ireland
IT Back up, Disaster Recovery and hot site	Ireland
Internal Audit	Ireland
Cloud storage of Microsoft applications	Ireland
Regulatory reporting software (Cloud)	France

B.8 Assessment of Governance

The company completes an annual corporate governance code review assessing its compliance with the Corporate Governance Requirements for Insurance Undertakings 2015 providing the company with an opportunity to assess itself and evidence its compliance with these requirements annually. Where there are changes to the business strategy that may result in changes to internal processes and products, processes exist such as the new product approval process to ensure the effective inclusion of all areas of the business to assess both the impact and risk of such changes to the business model. There is also ongoing assessment of internal controls that support the company’s effective decision making and governance through the company internal audit programme, the compliance monitoring and review

programme and the risk review programme. These individual review programmes provide their outputs to the Board and its Committees as part of the regular reporting issued by each function. The Board of the company are responsible for the oversight and effective implementation of best practices as well as regulatory requirements for corporate governance within the company. The regular internal review carried out on the company's system of governance is in accordance with Regulation 44(3) and 44(9) of S.I.485.

The company has no further information to disclose relevant to its systems of governance.

C: Risk Profile

Section C provides information on the key risks encountered by the Company as well as the corresponding processes for monitoring the risk exposures and the techniques in place for mitigating these risks.

Risk Management Objectives and Risk Profiles

The risk management function is led by the Director of Risk & Compliance and is responsible for the design and implementation of the risk management system. It oversees the identification, measurement, monitoring, management and reporting of all risk types. The company's risk profile is stable and is currently dominated by underwriting risk and market risk. Other key risks that the company faces includes credit, liquidity, operational (including operational resilience), cyber, strategic, reputational, climate and conduct risks. The risk management function reports to the Director of Risk & Compliance with additional reporting lines directly to the CEO and Board.

The key internal risk metric is the Solvency II Solvency Capital Requirement which quantifies the key risks to the business. The SCR is calibrated to a level which is broadly consistent with a 1 in 200-year event over a 12-month time horizon. The SCR facilitates the quantification of risk at the individual risk level and allows for diversification between risk types.

C.1 Underwriting Risk

Underwriting risk is the key risk type to which the company is exposed and arises from uncertainty in the occurrence, amounts and timing of non-life insurance obligations. The key risk associated with any insurance contract is the possibility that an insured event occurs and that the timing and amount of actual claim payments differ from expectations. The principal lines of business covered by the company include public liability, employers' liability, motor and property. The company manages underwriting risk through its underwriting strategy, claims handling and reinsurance arrangements. Insurance obligations can take many years to settle and the company sets aside reserves to cover all past liabilities. There is a risk that the cost of these liabilities may be higher than anticipated, in some cases significantly so.

Risk Exposure

Underwriting risk is restricted to lines and territories where the company has an underwriting competency. In effect, policy limits are set at a level to mitigate the impact of extreme loss experience to a manageable proportion of capital.

The key underwriting risk metric is the Net Loss Ratio. This assesses claim performance versus premium earned. It is recognised that the insurance cycle, exceptional individual losses, catastrophes, the inherent volatility of insurance losses and other dynamics will cause underwriting performance to fluctuate over time. Whilst the company will tolerate a degree of short-term volatility, a more stringent standard is set in the longer term. As at the 31 December 2023, the company's net loss ratio stood at 71.6% (2022: 55.1%).

Risk Concentration

The company is susceptible to claim aggregation due to policyholders being concentrated by type, risk exposures and other factors. All underwriting risk is concentrated in the Republic of Ireland. Business is also concentrated by line of business, being predominantly Public Liability, though there are material volumes of Employers Liability, Property and Commercial Motor. Smaller volumes of Personal Motor, Professional Indemnity and other lines offer further diversity. The other significant insurance risk concentration relates to the fact that the company primarily insures public sector organisations. While keeping the insurance needs of Members at the top of the agenda, the company endeavours to apply core underwriting competencies to further diversify the insurance portfolio into complementary lines and policyholders. In any case, concentrations are actively managed and are significantly mitigated by an appropriate reinsurance programme.

Risk Mitigation

The Underwriting Policy which is approved by the Board, establishes the underwriting strategy and principles and it defines underwriting limits, risk selection, authorities, escalation procedures and actuarial review requirements. It is implemented by means of underwriting guidelines. As with all company policies, the Underwriting Policy, together with, the underwriting approval limits set out in the company's Authorisation Levels and Signatories Document, are reviewed on an annual basis to ensure their continued effectiveness. The company has developed its underwriting strategy to diversify the type of insurance risks written, and within each of the types of risk, to achieve a sufficiently large population of risks to reduce the variability of the expected outcome. The underwriting strategy includes the employment of appropriately qualified underwriting personnel, the targeting of certain types of business, constant review of pricing policy using up-to-date statistical analysis and claims experience and the surveying of risks carried out by experienced personnel.

The Reinsurance Policy which is approved by the Board establishes the reinsurance strategy and principles. The extensive reinsurance programme, delivered by a well-diversified panel of high-quality reinsurers, reduces the variability of the underwriting result. For its motor, employer's liability and public liability business, the company has in place excess of loss reinsurance treaties. For its property business, the company operates proportional and catastrophe reinsurance treaties. Again, the Reinsurance Policy, together with, the relevant approval limits set out in the company's Authorisation Levels and Signatories, are reviewed on an annual basis to ensure their continued effectiveness.

A primary objective of the company is to ensure that sufficient reserves are available to cover liabilities. The company uses an in-house actuarial team supported by external reviews to assist with the estimation of liabilities to ensure that the company's reserves are adequate and there is oversight of the reserving process through internal management and Board committees. The company holds a margin for

uncertainty in addition to best estimate reserves to reduce the likelihood of inadequate reserves materialising.

C.2 Market Risk

Market risk arises from financial instrument market price volatility. It reflects the structural mismatch between assets and liabilities, particularly with respect to duration. It includes interest rate risk, equity risk, property risk, spread risk, currency risk and asset concentrations.

Prudent Person Principle

Company assets are invested in highly rated investments in accordance with the “prudent person principle”. Investment decisions are made in the best interests of policyholders and other beneficiaries. Consequently, the fundamental objective is that all valid claims and expenses are paid as they fall due. In practice, assets are allocated into two notional portfolios which have different objectives – the matched portfolio and the risk portfolio.

The Matched portfolio

The primary investment objective of the matched portfolio is to ensure that the company meets policyholder obligations as they fall due. This implies high quality, secure and liquid investments with characteristics that approximately match those of the liabilities. The secondary investment objective of the matched portfolio is to maximise investment returns over the long term to contribute to long term profitability, subject to a pre-defined and limited risk appetite as per the Risk Appetite Statement. The performance of the matched portfolio will be assessed on a total return basis against a benchmark portfolio that approximates to a risk-free portfolio with a duration profile equal to that of the liabilities.

The Risk Portfolio

The risk portfolio is composed of all investments that are surplus to the matched portfolio. The primary investment objective of the risk portfolio is to contribute to long term profitability through investment returns. The secondary investment objectives of the risk portfolio are capital preservation, diversification of the overall portfolio and facilitation of the long-term strategic objectives of the company, subject to a pre-defined and limited risk appetite. The performance of the risk portfolio is assessed on a total return basis against a combination of published benchmark indices which together approximate to the profile of the risk portfolio in terms of asset classes, territories, duration and other characteristics.

Risk Exposure

The level of surplus assets currently in the business results in a risk profile that has a significant weighting towards market risk. The principal market risk relates to equity holdings. The company invests only in assets and instruments whose risks can be properly identified, monitored, managed and taken into account in the assessment of solvency. The company follows a high quality, low risk investment strategy aligned to the prudent person principle. The focus is on high quality bonds and cash, with limited holdings in equities and property.

Interest Rate Risk

Interest rate risk relates to the sensitivity of the values of assets and liabilities to changes in the term structure of interest rates. The company faces a significant interest rate risk due to the nature of its investments and liabilities. Interest rate risk arises primarily from the company’s investments in fixed interest debt securities and from insurance liabilities.

As at 31 December 2023, the company had the following assets that are exposed to interest rate risk as per the Financial statements:

Financial assets subject to interest rate risk		
	2023	2022
	€'000	€'000
Debt securities		
- Irish Government fixed-interest bonds	53,334	44,804
- Other government fixed-interest bonds - eurozone	353,165	293,619
- Other government fixed-interest bonds - non-eurozone	39,925	34,341
- Corporate bonds	470,154	280,444
Total	916,578	653,208

Equity Risk

Equity risk relates to the volatility of equity market prices. This volatility may be caused by factors specific to the individual financial instrument, factors specific to the issuer or factors affecting all similar financial instruments traded in the market. Equity risk excludes changes due to currency movements, which is considered as a separate risk type. The company is subject to equity risk due to changes in the market values of its holdings of quoted shares, unquoted shares and managed funds.

Property Risk

Property risk relates to the volatility of real estate market prices. The company is subject to property risk due to changes in the market values of its investment properties.

Spread Risk

Spread risk mainly relates to changes in the market value of bonds due to changes in the credit standing of the issuer. The company limits the credit quality of bonds in which it may invest.

The following table provides information as per the Financial Statements regarding the market risk exposure of the company by classifying debt securities by credit ratings as at 31 December 2023:

Market risk exposure by credit rating								Not	Total
	AAA	AA	A	BBB	BB	B	rated		
2022 to 2023	€'000	€'000	€'000	€'000	€'000	€'000	€'000	€'000	
Financial assets at fair value through profit or loss									
Debt securities									
2023	80,367	247,810	280,391	267,182	5,813	-	35,015	916,578	
2022	135,174	185,665	262,159	132,639	18,947	4,628	-	739,212	

Currency Risk

Currency risk relates to the sensitivity of the value of assets and liabilities to changes in currency exchange rates. The company's liabilities are mostly denominated in Euro. The company holds investment assets in foreign currencies, which gives rise to exposure to exchange rate fluctuations. The company is only exposed to high-quality currencies including British Pounds (GBP), US Dollars (USD), Danish Krone (DKK) and Swiss Francs (CHF).

As at 31 December 2023, the carrying amount of the company's foreign currency denominated assets as per the Financial Statements was as follows:

Carrying amount of the company's foreign currency denominated assets	Foreign	Foreign	Net
	currency	currency	
	gross	derivatives	
2023	€'000	€'000	€'000
British Pounds (GBP)	13,776	13,787	(11)
Danish Krone (DKK)	5,819	4,026	1,793
Swedish Krona (SEK)	-	-	0
Swiss Francs (CHF)	5,569	2,167	3,402
US Dollars (USD)	56,386	51,202	5,184
Total	81,550	71,182	10,368

Carrying amount of the company's foreign currency denominated assets	Foreign	Foreign	Net
	currency	currency	
	gross	derivatives	
2022	€'000	€'000	€'000
British Pounds (GBP)	14,655	14,570	85
Danish Krone (DKK)	14,935	9,418	5,517
Swedish Krona (SEK)	800	-	800
Swiss Francs (CHF)	3,956	1,018	2,938
US Dollars (USD)	30,535	29,727	808
Total	64,881	54,733	10,148

Asset Concentration

Asset concentrations arise where there is a lack of diversification, e.g. by issuer.

Risk Concentration

Assets are diversified to avoid accumulations of risk in the portfolio as a whole. In particular, the company is not exposed to an excessive reliance on any one asset, asset class, counterparty, group of counterparties, territory or other investment characteristic. This is achieved by concentration limits and tolerance thresholds defined in the Risk Appetite Statement.

Risk Mitigation

Market risk is managed through the application of the company's Investment Policy and Risk Appetite Statement, each of which have been approved by the Board and reviewed on an annual basis. The Investment Policy outlines how market risks are managed. Investments are limited to assets whose risks can be properly identified, monitored and managed. The company employs appropriately qualified and experienced personnel to manage the investment portfolio. The Risk Appetite Statement defines the extent of permissible market risk exposures in terms of specific operational limits. It imposes limits on quantity, currency, territory, diversification, issuer credit quality, issue credit quality, duration and other

characteristics. The company also enters into forward currency contracts to mitigate against currency risk. Consideration is given to the additional risk that a derivative presents, therefore, derivative counterparties are subject to minimum credit rating requirements and are required to be approved credit institutions. The continued effectiveness of these risk mitigation techniques is regularly monitored through a series of stress testing and scenario analysis, together with, internal audit reviews.

C.3 Credit Risk

Credit risk arises from an unexpected default or deterioration in the credit standing of counterparties and debtors, including reinsurance and premium receivables.

Risk Exposure

The company is exposed to credit risk from its operating activities, primarily customer and reinsurer receivables, from cash deposits and bonds from the investment portfolio, and from its loans to local authorities. A portion of member business is retro-rated which allows payment of premium as losses are reported or paid, depending on the contract, rather than paying all premium up front.

Risk Concentration

Credit concentration risk is managed via the company's Risk Appetite Statement. The Risk Appetite Statement requires diversification by reinsurance counterparty. In particular, no reinsurance counterparty may exceed 15% of the total reinsurance asset. This limit is increased to 25% for reinsurance counterparties with very high credit ratings, typically equivalent to S&P AA- or better. Limits are also set out in the Risk Appetite Statement for cash balances with credit institutions. The limits tend to be based on the credit quality of the approved credit institution.

Risk Mitigation

The Risk Appetite Statement sets out the operating limits for each reinsurance counterparty, cash counterparty and other credit exposures. The Risk Appetite Statement is regularly assessed for appropriateness and is approved by the Board annually. It is also planned to phase out retro premiums in the future, thereby, reducing the risk in this regard.

The following table shows the carrying value of assets, as at 31 December 2023, that are neither past due nor impaired, the ageing of assets that are past due but not impaired, and assets that have been impaired as per the company's Financial Statements.

	Neither past					Carrying amount
	due nor impaired	Past due less than 30 days	Past due 31 to 60 days	Past due 61 to 90 days	Past due more than 90 days	
2023	€'000	€'000	€'000	€'000	€'000	€'000
Debt securities	916,578	-	-	-	-	916,578
Other investments	191,773	-	-	-	-	191,773
Reinsurance assets (outstanding claims and receivables)	58,261	-	-	-	461	58,722
Loans and receivables	48,643	-	-	-	-	48,643
Insurance receivables	7,301	73	228	-	20	7,622
	1,222,556	73	228	-	481	1,223,338

	Neither past					Carrying amount
	due nor impaired	Past due less than 30 days	Past due 31 to 60 days	Past due 61 to 90 days	Past due more than 90 days	
2022	€'000	€'000	€'000	€'000	€'000	€'000
Debt securities	739,212	-	-	-	-	739,212
Other investments	174,080	-	-	-	-	174,080
Reinsurance assets (outstanding claims and receivables)	47,690	-	1,614	-	127	49,431
Loans and receivables	97,276	-	-	-	-	97,276
Insurance receivables	3,788	72	9	-	131	4,000
	1,062,046	72	1,623	-	258	1,063,999

C.4 Liquidity Risk

Liquidity risk is the risk that the company does not have sufficient liquid financial resources, such as cash, to meet its financial obligations when they fall due. Liquidity risk also arises where assets can only be liquidated at a material cost.

Risk Exposure

The company is exposed to daily calls on its cash resources, mainly for claims and other expense payments.

Risk Mitigation

The Investment Policy is reviewed annually for continued effectiveness and sets out the assessment and determination of what constitutes liquidity risk for the company. Compliance with the policy is monitored and exposures and breaches are reported to the Risk Committee. Guidelines are set for asset allocations, portfolio limit structures and maturity profile of assets in order that sufficient funding is available to meet insurance contract obligations. Asset liquidity is such that it is sufficient to meet cash demands under extreme conditions. Localisation of assets is such that it ensures their availability. The Investment Policy specifies a Contingency Funding Plan should a liquidity shortfall arise. The company has mitigated much of its liquidity risk through holding liquid assets such as cash and sovereign bonds as well as asset and liability matching. The company does not forecast expected profit in future premium (EPIFP) to cover a loss-making scenario, liquidity risk in this regard is therefore not an issue.

The following table shows the maturity analysis of financial assets and financial liabilities based on the remaining undiscounted contractual obligations as per the company's Financial Statements.

Maturity analysis (contracted undiscounted cash flow basis)	Carrying value	Within 1 year	Within 1 to 5 years	After 5 years	No maturity date	Total
2023	€'000	€'000	€'000	€'000	€'000	€'000
Financial assets

Total	637,189	187,007	338,439	111,219	-	636,665

C.5 Operational Risk

Operational risk arises from inadequate or failed internal processes, from personnel and systems, or from external events. Operational risk includes legal and regulatory compliance risk but excludes strategic and reputational risk. In particular, the company's operational risk includes outsourcing risks, including bankruptcy of the service providers, disruption of services and failure to achieve standards.

Risk Exposure

The company regularly reviews all major operational risks. The Risk Committee reviews the risk assessment to ensure that all operational risks are identified and evaluated for recommendation to the Board. Each operational risk is assessed by considering the potential impact and the likelihood of the event occurring. The effectiveness of internal controls on controlling operational risk is also measured.

Compliance monitoring is carried out on an ongoing basis, according to an annual compliance plan which is approved by the Audit Committee and recommended to the Board.

Internal audits are carried out on a continuous basis, in accordance with a rolling internal audit plan approved by the Audit Committee. The internal audit findings are updated on a monthly basis and circulated to the Board.

Risk Mitigation

The company has a Business Continuity Plan that considers the end-to-end operational resilience of critical services and for the restoration of functions should critical business processes be disrupted. This Business Continuity Plan is reviewed semi-annually by internal management for its continued effectiveness. As required, any changes to the plan are reviewed and approved by the Risk Committee.

The company outsources certain functions to service providers. Outsourced arrangements are governed by the company's outsourcing policy as well as service level agreements. Service providers are required to adhere to company policy. Service providers are subject to detailed reporting requirements.

Operational Resilience

Operational resilience is the ability of IPB to identify and prepare, respond and adapt and recover and learn from disruptions, including internal and external events that could threaten its ability to deliver critical services to its members/customers, maintain its reputation, or protect the interests of its stakeholders. IPB's Operational Resilience Framework is designed to help the Company prepare for, respond to, and recover from disruptions providing a structured and coordinated approach to managing risks and maintaining operational resilience, which is critical for the long-term success of the company and for protecting the interests of its stakeholders. The business continuity framework is fully integrated to and represents a fundamental pillar (respond & adapt) of IPB's operational resilience framework.

C.6 Other Material Risks

Other risks to which the company is exposed include strategic risk, reputational risk, conduct risk and cyber risk.

Strategic Risk

Strategic risk arises from ineffective business strategies, failure to implement business strategies and unanticipated changes in the business environment.

The company takes its strategic direction from the Board that monitors progress against the business plan which is reviewed annually and is subject to Board approval. The company monitors changes in the business environment and considers their impact on the business. The company also considers the implications that changes in the operating model might have for the quality and efficiency of engagement with Members and other policyholders. Other strategic considerations relate to the efficient use of capital and the company's ability to raise capital in the medium-to-long-term.

Reputational Risk

Reputational risk arises from negative perception of the business amongst Members, customers, the Central Bank, counterparties, business partners and other stakeholders. The company actively manages all sources of reputational risk through its core strategy which is approved by the Board.

Conduct Risk

Conduct risk is the risk the company poses to its customers from its direct interaction with them. Conduct risk recognises the risks that can stem from the company's strategy, business model, culture, governance and other internal structures as well as its systems and processes. In IPB this may occur through product

design, sales/claims practices and behaviours of individuals at any level within the company. Conduct risk is managed in the company through adhering to all applicable laws and regulations, as well as relevant internal policies and procedures. In addition, there is a clear articulation and embedding of company values and behaviours.

Cyber Risk

Cyber risk is a risk that continues to emerge as a significant threat to insurance companies. The recent advances in Generative Artificial Intelligence (AI) creates new opportunities in business efficiency and customer service, however, leads to increased risk in Cyber Security. The company has a responsibility to ensure that it has made every effort to secure the data on its network and to ensure that the systems it utilises are secure and reliable so that it may best serve its Members and clients. IPB has in place an established Information Security Framework that details the roles, responsibilities and governance structure put in place by the company to support its information security objectives as well as the policies, procedures and standards that are in force in the company.

Geopolitical Risk

Geopolitical risk: A series of interlinked dynamics are exacerbating volatility in global markets including the Middle East conflict, Russia's invasion of Ukraine, and U.S.-China competition. Geopolitical flashpoints pose cascading risks, notably the threat of a major terrorist attack as well as the looming threat of a cyber-attack disrupting physical and digital infrastructure. In addition, threats of a tariff war remain between the US, China, and EU also continue. 2024 will be a record year for elections as over 4 billion people across 76 countries go to the polls. The US election in November will dominate the global headlines as US policy outcomes can reverberate strongly across the world. Closer to home, local government elections are due to be held in mid-year and the likely outcome of these is currently quite uncertain. A General Election is expected early next year and election issues are similar to those prevalent across the EU with Housing, Health and Immigration at the forefront of voter debates.

Climate change and Sustainability

The company is committed to undertaking its activities in a sustainable manner. The company will continue to do this by evolving our risk identification, assessment and management through proactive monitoring and mitigation of threats and opportunities associated with the Environmental, Social and Governance issues facing the company as well as our stakeholders. As a mutual insurer, our purpose is to safeguard and protect the insurable interests of our Members. The company understands that it has a responsibility to ensure the long-term sustainability of our strategic business and operational activities thus Sustainability permeates all attributes, disciplines and focus areas of Risk Management.

Sustainability and Environmental, Social And Governance ("ESG") Factors have become a key consideration for all organisations, including our Members, and IPB is no different in this respect. Society expects that Sustainability and ESG factors are central to how companies operate and reflected in the decisions that they make. Our Members, as public bodies, have a pivotal role to play in the decarbonisation transition. As their mutual insurer, we will support our Members and the communities which they serve during this transition.

In 2023, IPB launched its second Sustainability Strategy 2023-2026. The Sustainability Strategy aligns with our overall company strategy – which reflects the key principle of 'Our Members and Our People First –

Together Delivering Profitable Growth to Support Long Term’. 2023 was an important year for IPB in terms of embedding the six commitments from our Sustainability Strategy 2023-2026 and key to all of this was the development of a set of KPIs to enable us to measure the effective implementation of the Strategy in the coming years and to provide the Board and its subcommittees with the required visibility to progress in achieving our Sustainability objectives. These KPIs will be overseen by a new Sustainability Steering Committee established during the year.

Significant achievements were made in communicating our value proposition in relation to Sustainability to our Members in 2023. Our Members, as public bodies, have a pivotal role to play in the decarbonisation transition. Working with our Members, through the IPB Local Authority Member Sustainability Forum and the Local Authority Climate Action Forum for example, has enabled us to guide and advise on Members’ needs in respect of insurance products to ensure they are appropriate especially in respect of climate action and sustainability. In July, IPB sponsored the inaugural Local Authority Climate Forum face to face networking event as part of the Mary Robinson Climate Conference, a key event in the Ballina 2023 programme of events.

Other key highlights included the appointed of a new Company Secretary, Director of Legal & Sustainability in July who has responsibility to ensure sustainability is embedded in IPB. This year we also commenced an engagement process with our vendors on Scope 3 greenhouse gas emissions as well as implementing a LED light replacement programme in our offices which has helped us reduce our energy consumption.

Climate change is no longer an emerging risk — the stakes are high, not just for the future viability of the insurance sector, but also for society. Climate change is an evolving and multifaceted systemic risk and one that the insurance industry and IPB continue to examine and research to understand and develop a strategy to address over the long term. This is an iterative process starting with fully appreciating the materiality of the risk. IPB have taken a number of steps to understand and assess the materiality of the risk through our own risk assessment and scenario analysis but also through engagement key stakeholders and third parties. This work will continue over the coming years. To that end, IPB will continue to invest time and resources in investigating, understanding and where possible addressing and mitigating the risks to ensure the long-term viability of the company. These actions also include continuing with IPB’s Sustainability strategy where all activities in the insurance value chain, including interactions with stakeholders, are done in a responsible and forward looking way by identifying, assessing, managing, and monitoring risks and opportunities associated with environmental, social and governance issues.

C.7 Risk Sensitivity Analysis

The tables below provide sensitivity analysis on the company’s key risks as per the financial statements. The impact of a change in a single factor is shown with other assumptions left unchanged for each of the risk types.

Risk	Risk methods and assumptions used in preparing the sensitivity analysis
Underwriting risk	The impact of an increase in net loss ratios for general insurance business by 5%.
Currency risk	The impact of a change in foreign exchange rates by ± 10%.

Interest rate risk	The impact of a change in the yield curve on IPB's fixed interest portfolio by 100 basis points and negative 25 basis points. The stress excludes the impact of the change in cashflows from floating rate notes. The underlying yield curve is based on prevailing swap rates as at year end 2023.
Equity risk	The impact of a change in equity market values by $\pm 10\%$.

These sensitivity factors have the following impacts on profit before tax and equity:

Sensitivity analysis		2023	2022
Impact on profit before tax		€'000	€'000
Underwriting risk	5.00%	(6,339)	(6,360)
Currency risk	10.00%	1,037	1,015
Currency risk	-10.00%	(1,037)	(1,015)
Interest rate risk	1.00%	(27,755)	(16,776)
Interest rate risk	-0.25%	23,654	15,027
Equity risk	10.00%	19,177	17,408
Equity risk	-10.00%	(19,177)	(17,408)

Sensitivity analysis		2023	2022
Impact on equity		€'000	€'000
Underwriting risk	5.00%	(5,547)	(5,565)
Currency risk	10.00%	907	888
Currency risk	-10.00%	(907)	(888)
Interest rates	1.00%	(24,286)	(14,679)
Interest rates	-0.25%	20,697	13,149
Equity risk	10.00%	16,780	15,232
Equity risk	-10.00%	(16,780)	(15,232)

During the year, the material risks of the business were also subject to a wide range of stress and scenario tests in order to provide an adequate basis for the assessment of the overall solvency needs of the company over its business planning horizon. Stress and scenario testing and related analysis were conducted in line with the ORSA Policy and the results of the tests contained in the Risk Report as well as the full ORSA report which was submitted to the Central Bank in December 2023. The identified stresses and scenarios were decided upon based on a number of discussions with the Board, Risk Committee and the relevant function manager.

Some of the instantaneous stresses carried out as part of the ORSA are presented in the table below. The ORSA process was carried out on Q3 2023 data, however, the absolute reduction in the SCR Coverage Ratio under each scenario would not be materially different if repeated on Q4 2023 data.

The company remains well capitalised in these extreme scenarios and there is no requirement for material management actions for the company to avoid breaching the SCR.

Description	Q3 2023 SCR Coverage	Stressed SCR Coverage	Reduction in SCR Coverage
Severe Claims Deterioration	310%	181%	-129%
Insurance products not fully supported by Reinsurance	310%	179%	-131%
High inflation triggering high wage spiral and low growth	310%	241%	-69%

C.8 Dependencies between risk modules

Risk categories and specific risks are correlated to each other to a greater or lesser extent. Risks are correlated where an unfavourable outcome in one risk tends to be accompanied by an unfavourable outcome in another risk. For example, equity risk and property risk are correlated in the sense that a fall in property values can often be accompanied by a fall in equity values.

Risks have little correlation where it is unlikely that both risks will experience an unfavourable outcome at the same time. Such risks are said to be largely uncorrelated or independent.

The result is a 'diversification benefit'. For example, lapse risk may be somewhat independent of premium risk as lapse rates are unlikely to increase when premium rates are inadequate.

As the same capital resources are used to manage many different sources of risk, it is necessary to manage risk as a portfolio. An isolated change in risk in one part of a portfolio will also influence the capital required to finance other risks due to correlations. Consequently, it is necessary to explicitly model the correlations between risks. The quantification of correlations is highly uncertain and the capital model relies on the 'dependency structure' defined in the Solvency II Standard Formula Technical Specification.

The company's Risk Report includes quantification of the diversification benefits assumed in the capital model and the appropriateness of this is tested on an annual basis as part of the ORSA process.

C.9 Any other information

The company does not use any special purpose vehicles (SPV) to transfer any of its risks.

D: Valuation for Solvency Purposes

D.1 Assets

The following table analyses the valuation of the company's assets as at 31 December 2023 and the prior year for both Solvency II purposes and financial statements purposes.

As at 31 December 2023

Ref	Asset Category	Solvency II €'000	Financial statements €'000	Difference €'000
1	Intangible Asset	-	332	(332)
2	Deferred Tax Asset	-	181	(181)
3	Property, plant and equipment (PPE)	10,450	457	9,993

Description of the basis, methods and assumptions used for valuation:

Ref	Asset Category	Solvency II	Financial statements
1	Intangible Asset	The company's intangible assets comprise of IT software that does not meet the criteria under Solvency II valuation rules, i.e. it cannot be sold separately and there is not a quoted market price in an active market for the same or similar intangible assets. Therefore, the company's intangible assets are valued at zero under Solvency II.	In the Irish GAAP financial statements the intangible assets are valued at cost less accumulated amortisation and accumulated impairment losses.
2	Deferred Tax Asset	For the company, the difference between the deferred tax asset in the Financial Statements and the deferred tax liability created under Solvency II pertains to the deferred tax on the changes in valuation in moving from Irish GAAP to Solvency II. That is, it is largely driven by the reduction in the (net) technical provisions under Solvency II. This would result in an instantaneous profit, which would incur corporation tax at 12.5%.	Deferred tax assets and liabilities are measured at the tax rates that are expected to apply to the period when the asset is realised or the liability is settled, based on the tax rates and tax laws that have been enacted or substantively enacted by the end of the reporting period.
3	Property, plant and equipment (PPE)	Under Solvency II, the valuation of PPE is based on the core principle in the directive "assets shall be valued at the amount for which they could be exchanged between knowledgeable willing parties in an arm's length transaction". As the company's PPE mainly relates to leasehold improvements, and IT assets (except for the Right of Use Asset), it is considered unlikely that these would have any significant resale value in an arm's length transaction. Therefore, a zero value is considered the most prudent for these. In terms of the Right of Use Asset, as the cost less depreciation model is prohibited under Solvency II, the value of the lease liability is deemed a reasonable proxy for the fair value.	In the financial statements, the company uses the cost model to value PPE, i.e. cost less any accumulated depreciation and accumulated impairment losses.

4	Investment properties	<p>Market Valuations are carried out on our investment properties at each year end by the property managing agents using the RICS (Royal Institute of Chartered Surveyors) Valuation – Professional Standards. Every three years a full red book valuation is carried out. On an annual basis, desk-based valuations are carried out and valuation certificates are issued.</p> <p>This is consistent with the Solvency II valuation principles. The Solvency II value also includes any accrued rental income, i.e. market value plus accrued income.</p>	<p>The same valuation method is applied to the financial statements; - however, accrued income is not included in the valuation.</p> <p>Accrued income is shown as a separate line item (“other” as shown in valuation table above) in the financial statements.</p>
5	Listed Equities	<p>Under Solvency II, in accordance with Article 75 of the Directive, assets shall be valued at the amount for which they could be exchanged between knowledgeable willing parties in an arm’s length transaction.</p> <p>The Solvency II Valuation principles are consistent with that of Irish GAAP, however, the Solvency II value also includes accrued income, i.e. market value plus accrued income.</p> <p>Note: Preference shares are included as equities under Solvency II. Exchange traded funds (ETFs) and collateralised securities are excluded.</p>	<p>Under Irish GAAP, financial assets are measured at fair value through the profit or loss based on quoted (unadjusted) prices in active markets. For financial assets not traded in an active market, the fair value is determined using appropriate valuation methods.</p> <p>Accrued income is shown as a separate line item (“other” as shown in valuation table above) in the financial statements.</p> <p>Dividend withholding tax recoverable is shown as trade receivable under Irish GAAP.</p>
6	Unlisted Equities	<p>Under Solvency II, in accordance with Article 75 of the Directive, assets shall be valued at the amount for which they could be exchanged between knowledgeable willing parties in an arm’s length transaction.</p> <p>The Solvency II Valuation principles are consistent with that of Irish GAAP, however, the Solvency II value also includes accrued income, i.e. market value plus accrued income.</p>	<p>Under Irish GAAP, financial assets are measured at fair value through the profit or loss based on quoted (unadjusted) prices in active markets. For financial assets not traded in an active market, the fair value is determined using appropriate valuation methods.</p> <p>Accrued income is shown as a separate line item (“other” as shown in valuation table above) in the financial statements.</p>
7	Government Bonds	<p>Under Solvency II, in accordance with Article 75 of the Directive, assets shall be valued at the amount for which they could be exchanged between knowledgeable willing parties in an arm’s length transaction.</p>	<p>Under Irish GAAP, financial assets are measured at fair value through the profit or loss based on quoted (unadjusted) prices in active markets. For financial assets not traded in an active market, the fair value is determined using appropriate valuation methods.</p>

		<p>The Solvency II Valuation principles are consistent with that of Irish GAAP, however, the Solvency II value also includes accrued income, i.e. market value plus accrued income.</p>	<p>Accrued income is shown as a separate line item (“other” as shown in valuation table above) in the financial statements.</p>
8	Corporate Bonds	<p>Under Solvency II, in accordance with Article 75 of the Directive, assets shall be valued at the amount for which they could be exchanged between knowledgeable willing parties in an arm’s length transaction.</p> <p>The Solvency II Valuation principles are consistent with that of Irish GAAP, however, the Solvency II value also includes accrued income, i.e. market value plus accrued income.</p>	<p>Under Irish GAAP, financial assets are measured at fair value through the profit or loss based on quoted (unadjusted) prices in active markets. For financial assets not traded in an active market, the fair value is determined using appropriate valuation methods.</p> <p>Accrued income is shown as a separate line item (“other” as shown in valuation table above) in the financial statements.</p> <p>Note: Preference shares are classified as corporate bonds under Irish GAAP.</p>
9	Collateralised Securities	<p>Under Solvency II, in accordance with Article 75 of the Directive, assets shall be valued at the amount for which they could be exchanged between knowledgeable willing parties in an arm’s length transaction.</p> <p>The Solvency II Valuation principles are consistent with that of Irish GAAP, however, the Solvency II value also includes accrued income, i.e. market value plus accrued income.</p>	<p>Under Irish GAAP, financial assets are measured at fair value through the profit or loss based on quoted (unadjusted) prices in active markets. For financial assets not traded in an active market, the fair value is determined using appropriate valuation methods.</p> <p>Accrued income is shown as a separate line item (“other” as shown in valuation table above) in the financial statements.</p> <p>Note: Collateralised securities are classified as equity securities in the financial statements.</p>
10	Collective Investment Undertakings	<p>Under Solvency II, in accordance with Article 75 of the Directive, assets shall be valued at the amount for which they could be exchanged between knowledgeable willing parties in an arm’s length transaction.</p> <p>The Solvency II Valuation principles are consistent with that of Irish GAAP, however, the Solvency II value also includes accrued income, i.e. market value plus accrued income.</p> <p>Exchange traded funds (ETFs) are included in this category under Solvency II.</p>	<p>Under Irish GAAP, financial assets are measured at fair value through the profit or loss based on quoted (unadjusted) prices in active markets. For financial assets not traded in an active market, the fair value is determined using appropriate valuation methods.</p> <p>Accrued income is shown as a separate line item (“other” as shown in valuation table above) in the financial statements.</p> <p>Note: ETFs are classified as equity securities in the financial statements.</p>

11	Derivatives	Under Solvency II, derivative financial instruments are measured at the gross fair value as at the reporting date. The company's derivative financial instruments relate to forward currency contracts. All forward sales are shown as assets and all forward purchases are shown as liabilities.	Under Irish GAAP, derivatives are initially measured at fair value on the date the contract is entered into, and subsequently re-measured at fair value at the reporting date. Each derivative is carried as a financial asset when the fair value is higher than the value at inception and as a financial liability when the fair value is lower than the value at inception.
12	Deposits	<p>Under Solvency II, this relates to deposits other than cash and cash equivalents that cannot be used to make payments until after the fixed term maturity date. All fixed term deposits, regardless of their term, are included here.</p> <p>Under Solvency II, Article 16 (1) of the Delegated Regulations states that insurance and reinsurance undertakings shall not value financial assets or financial liabilities at cost or amortised cost. Such assets are valued at the amount for which they could be exchanged between knowledgeable willing parties in an arm's length transaction.</p> <p>Accrued income is also included in the Solvency II value.</p>	<p>Under Irish GAAP, deposits classified as "loans and receivables" relate to deposits with a fixed term of greater than 3 months. Deposits with a fixed term of 3 months or less are included in "cash and cash equivalents".</p> <p>Under Irish GAAP "loans and receivables" are subsequently measured at amortised cost using the effective interest rate.</p> <p>Accrued income is shown as a separate line item ("other" as shown in valuation table above) in the financial statements.</p>
13	Loans to local authorities	Under Solvency II, Article 16 (1) of the Delegated Regulations states that insurance and reinsurance undertakings shall not value financial assets or financial liabilities at cost or amortised cost. Such assets are valued at the amount for which they could be exchanged between knowledgeable willing parties in an arm's length transaction.	<p>Under Irish GAAP, loans to Local Authorities are classified as "loans and receivables" and are subsequently measured at amortised cost using the effective interest rate.</p> <p>However, as loan repayments fall due at year end, there is no difference between the valuation under Solvency II and under Irish GAAP at year end, despite the valuation basis or method being different.</p>
14	Reinsurance Recoverable	Under Solvency II, the technical reserves are discounted. Additional margins for uncertainty are excluded from the Solvency II technical provisions valuation.	In the financial statements technical reserves are undiscounted. In addition, the claims reserves in the financial statements include additional margins for uncertainty pertaining to loadings for reduction in the

			discount rate and the introduction of Periodic Payment Orders (PPOs) as well as a loading representing a general provision for changes in the claims environment.
15	Insurance Receivables	<p>Insurance receivables relates to insurance debtors only measured at their carrying value as at the reporting date.</p> <p>Under Solvency II rules ‘provision for recoverable retro premium’ is reclassified out of assets to be recognised as a cash inflow offsetting the Best Estimate Technical Provision in liabilities. The valuation of these cash inflows has changed to a discounted basis consistent with the cash outflows and in line with Solvency II valuation principles.</p>	<p>In the Irish GAAP financial statements a provision for premium adjustments for retrospectively rated policies is recognised when provision is made for related losses.</p> <p>The valuation basis for insurance debtors, on the other hand, is consistent with the Solvency II valuation principles and therefore, no valuation difference arises.</p>
16	Reinsurance Receivables	Insurance receivables relates to reinsurance debtors, measured at their carrying value as at the reporting date.	In the Irish GAAP financial statements, the valuation basis is consistent with the Solvency II valuation principles and therefore, no valuation difference arises.
17	Trade Receivables	<p>Trade receivables are measured at their carrying value as at the reporting date.</p> <p>Dividend withholding tax recoverable is included in the valuation of assets under Solvency II.</p>	Dividend withholding tax recoverable is included as a trade receivable under Irish GAAP – this is the only valuation difference arising.
18	Cash & Cash Equivalents	Under Solvency II, cash and cash equivalents relates to cash at bank only (i.e. current accounts and call accounts). Accrued income is also included in the Solvency II valuation.	<p>In the Irish GAAP financial statements, cash and cash equivalents include cash at bank (i.e. current and call accounts), together with, deposits with a fixed term of 3 months or less.</p> <p>Accrued income is shown as a separate line item in the Irish GAAP financial statements.</p>

Leasing Arrangements

The company’s only leasing arrangements relate to its office premises at 1 Grand Canal Square and some office equipment used on a day-to-day operating basis that are leased and are valued at fair value in the Solvency II balance sheet.

Related Undertakings

The company does not have any holdings in related undertakings or participations.

Criteria used to assess whether markets are active

The company assesses if a market is active by reference to Bloomberg data sources and consultation with external stockbrokers. If markets are deemed inactive, the quoted price for similar assets in an active market is applied where possible. If recent transactions of a similar asset on its own is not a good estimate of fair value, the fair value is estimated by using a valuation technique. The objective of using a valuation technique is to estimate what the transaction price would have been on the measurement date in an arm's length exchange motivated by normal business considerations. In instances where companies have gone into liquidation and their shares have been delisted from a stock exchange, the company's Head of Investments took a decision based on market knowledge and experience to write down the value of the shares to a flat level, pending the results of the liquidation process. Other than in this regard, no other estimation uncertainty exists in respect of the valuation of the company's investment assets.

D.2 Technical Provisions

The company's business is written on both claims made and losses occurring bases. Where "policy year" is referred to this is taken to be the notification year for claims made business and the accident year for losses occurring business. The following tables summarises the value of technical provisions on both gross and net bases.

Value of Technical Provisions

Gross Technical Provisions

IPB Gross Technical Provisions -		Claims Provision	Premium Provision	Risk Margin	Total Technical Provisions

Methods used to calculate technical provisions

The company uses a combination of actuarial methods to value technical provisions. The basis of the technical provisions are undiscounted gross reserves. For policy years where no further development is expected, the reserves are set equal to the case estimates present in that year. For other policy years where further development is expected, but there is sufficient incurred experience to be credible, chain-ladder methods are used to model the full future path of incurred claims.

For recent policy years there may not be enough incurred data to fully rely on. In this case development methods are weighted in with other methods that place initial estimates of ultimate claims on either loss ratios, or as a cost per unit exposure. Expected amounts are calculated by considering the statistic for prior years. Another method considered for recent years is the average cost per claim method – where claim numbers are multiplied by expected average ultimate costs.

The company uses premium and population, where appropriate, as an exposure measure. Typical measures of exposure such as turnover are not deemed to be a good measure of risk in its core business.

Estimates based on paid claims are also calculated, but usually do not form the basis of reserve selections as there is a long delay between claim notification and payment for much of the company's business which is dominated by liability lines.

For most classes, net of reinsurance claims are calculated by considering the average percentage recovered from reinsurance, allowing for changes in the reinsurance program. Recovery amounts are a small portion of gross liabilities and previous years provide a good benchmark for the rate of future reinsurance recoveries. The exception to this is Property that has a more extensive reinsurance programme, for which the same methods as described for calculating gross claims are also considered in valuing the net position.

Gross and net claims are discounted by considering the expected payment profile of claims over time, and discounting using risk free yield curves provided by EIOPA.

The risk margin is calculated using a modified Solvency Capital Requirement as specified by EIOPA. This is projected to develop over time in line with best estimate net technical provisions.

The following items defined in the Solvency II legislation are not relevant to the company regarding technical provisions:

- The company does not apply the matching adjustment.
- The company does not use the volatility adjustment.
- The company does not use transitional methods on the risk-free interest rate term structure.
- The company does not apply any transitional deductions.

Considerations by Line of Business

Medical Expenses and Income Protection

The company writes modest volumes of Personal Accident business that involves both medical expenses and income protection coverage. Historically, claims were not split between those two elements, and so these are modelled in aggregate.

Motor Vehicle Liability and Other Motor

The company writes modest volumes of motor business. Injury and damage claims are modelled separately.

Marine Aviation and Transport

The company writes only a very small amount of marine business.

Fire / Property

The company's property account contains a mix of exposures including covering council buildings and council owned social housing. Due to the higher volume of reinsurance recoveries in this class, methods used to calculate gross reserves are similarly applied in the calculation of net reserves.

General Liability

This is by far the company's largest class and contains a number of different exposures within it. The predominant lines are Public Liability and Employers Liability, and the valuation of these lines have been

further split by coverage type, claim type and type of insured. The company also writes a small amount of Professional Indemnity and Cyber, which are included in this class.

Legal Expenses

The company writes some Criminal Defence policies that are mainly valued using loss ratio methods as limited claims experience exists.

Other Items

Claims handling expenses have been estimated as a percentage of future reserves by considering the historic ratio of claims handling expenses to claims payments.

Provisions relating to unearned premiums have been calculated by considering expected loss ratios by line of business and applying those to unearned premiums.

Description of the level of uncertainty

The classes of business written by the company give rise to a significant degree of uncertainty concerning the ultimate cost of claims. Uncertainty arises for the following reasons in respect of most of the policies written by the company:

- Whether an event has occurred that would give rise to a policyholder suffering an insured loss.
- The extent of policy coverage and limits applicable.
- The amount of insured loss suffered by the policyholder.
- The timing of a settlement to the policyholder.
- The costs associated with handling claims.

Estimates must be made both for the expected cost of claims reported at the reporting date and for the expected ultimate cost of claims incurred but not yet reported (IBNR) at the reporting date. It can take a significant period of time before the ultimate claims cost can be determined with certainty.

The company uses estimation techniques, based on statistical analysis of past experience and future estimates, to calculate a range of estimated cost of claims outstanding at the reporting date, which is subjected to sensitivity analysis. These techniques take into account the characteristics of the company's business.

The company makes assumptions on a number of economic and non-economic factors in the calculation of technical provisions. Some of these assumptions are explicit while others are implicitly made when projecting ultimate claims costs. Significant sources of economic uncertainty include:

- Changes in the level of claims inflation – Many of the methods used to estimate technical provisions implicitly assume future inflation follows historical inflation. In this case, and in methods where there is an explicit inflation assumption, there is a risk that actual inflation deviates from the assumed level. The current level of general inflation in Ireland (and globally) is at elevated levels. This inflation may increase the cost of liability insurance in Ireland. A specific provision has been put in place at year end to allow for inflation in excess of historical levels. In deriving this provision, ECB forecasts over the next three years were considered and inflation assumptions were then applied to the runoff of reserves separately for liability and property lines of business.

- Potential future changes in the discount rate – A public consultation on the setting of the discount rate was launched in 2020, with no update on this as at the end of 2023. Any potential reduction in the discount rate would drive a significant increase in the cost of large claims. However, with interest rates rising during 2022 and 2023, the scale of this potential reduction in the discount rate may now be less. The impact to IPB is primarily on a gross basis with most of the increased costs expected to be passed to reinsurers. A specific provision for a potential change in the discount rate remains in place at year-end.

There are also non-economic factors that impact the technical provisions, these include:

- Changes in claims development pattern – Methods underlying the calculation of technical provisions project future claim development based on historical development. Potential change in this claim development is a significant source of uncertainty and may arise from changes in internal process or changes in mix of business which could affect future development. COVID-19 also had a distorting effect on the development of existing claims, and this required adjustments to be made to actuarial development factor models.
- Revised Personal Injuries Guidelines - revised personal injuries guidelines were adopted by the Judicial Council on 6 March 2021. These guidelines remain subject to judicial challenge and it remains to be seen precisely how the courts will apply the guidelines. The guidelines are also subject to review during 2024, as required by the act. As a result, a cautious approach has been adopted in recognising the impact of the guidelines.
- Emergence of latent claims – There is a potential for the emergence of a new type of claim which is currently not present in company data. Due to the nature of its business the company is exposed to aggregations of claims as the business is concentrated by policyholder type, geographical locations, risk exposures and other factors.

Valuation basis, method and assumption differences used for Irish GAAP financial statements

For all lines of business, the best estimate undiscounted Irish GAAP reserves form the basis of the Solvency II technical provisions. These are then discounted as per Solvency II valuation guidelines.

The main difference to the Irish GAAP financial statements is the inclusion of margins for uncertainty within the Irish GAAP financial statements.

Under Solvency II regulation a risk margin is held in addition to the best estimate liabilities. The €33.2 million risk margin is calculated using the cost of capital approach specified in the regulation.

The financial statements also include a provision of €0.5 million (plus margins and unallocated loss adjustment expenses (ULAE)) in respect of the MIBI levy for the year within the insurance reserves. Under Solvency II MIBI provisions are excluded from the technical provisions, and instead included within “Other Liabilities”.

The following tables provides a reconciliation between the technical provisions as per the Irish GAAP financial statements and the technical provisions for Solvency II purposes as at 31 December 2023.

2023	Gross of Reinsurance €'000	Net of Reinsurance €'000
Reserves in Financial Statements	651,899	596,820
Exclude MIBI & margins	(540)	(540)
Reserves excluding MIBI	651,359	596,280
Exclude UPR	(23,301)	(20,264)
Add Undiscounted Premium Provision (excluding retro premium)	15,831	17,866

Risk Margin	29,181	29,181
Total Technical Provisions	508,669	473,896

Refer to [Appendix 3](#) for the S.17.01.02 Non-Life Technical Provisions Template.

The decrease in technical provisions can be attributed to a decrease in the net best estimate claims provisions. This is attributable to many factors, including the Revised Personal Injuries Guidelines.

D.3 Other Liabilities

The following table analyses the valuation of the company's other liabilities as at 31 December 2023 for both Solvency II purposes and financial statements purposes.

As at 31 December 2023

Ref	Liability Category	Solvency II €'000	Financial statements €'000	Difference €'000
1	Provisions other than technical provisions	500	500	-
2	Deferred Tax Liabilities	10,414	-	10,414
3	Derivatives	71,182	93	71,090
4	Debts owed to credit institutions	10,450	-	10,450
5	Insurance Payables	6,148	6,148	-
6	Reinsurance Payables	5,319	5,319	-
7	Trade Payables	7,730	7,730	-
8	Any other liabilities	4,200	14,200	(10,000)
	Total other liabilities	115,943	33,989	81,954

As at 31 December 2022

Ref	Liability Category	Solvency II €'000	Financial statements €'000	Difference €'000
1	Provisions other than technical provisions	500	500	-
2	Deferred Tax Liabilities	10,616	-	10,616
3	Derivatives	54,733	88	54,644
4	Debts owed to credit institutions	11,579	-	11,579
5	Insurance Payables	7,430	7,430	-
6	Reinsurance Payables	2,333	2,333	-
7	Trade Payables	5,435	5,435	-
8	Any other liabilities	23,953	23,953	-
	Total other liabilities	116,580	39,740	76,840

Description of the basis, methods and assumptions used for valuation:

Ref	Liability Category	Solvency II	Financial statements
1	Provisions other than technical provisions	Other provisions relate to the company's share of potential provisions of the Motor Insurers' Bureau of Ireland, measured at its carrying value at the reporting date.	In the Irish GAAP financial statements, the valuation basis is consistent with the Solvency II valuation principles and therefore, no valuation difference arises.
2	Deferred Tax Liabilities	For the company, the difference between the deferred tax asset in the Irish GAAP financial statements and the deferred tax liability created under Solvency II pertains to the deferred tax on the changes in valuation in moving from Irish GAAP to Solvency II. That is, it is largely driven by the reduction in the (net) technical provisions under Solvency II. This would result in an instantaneous profit, which would incur corporation tax at 12.5%.	A deferred tax asset as opposed to a deferred tax liability is shown in the Irish GAAP financial statements as described above in the asset category section.

3	Derivatives	Under Solvency II, derivative financial instruments are measured at the gross fair value as at the reporting date. The company's derivative financial instruments mainly relate to forward currency contracts. All forward sales are shown as assets and all forward purchases are shown as liabilities.	Under Irish GAAP, derivatives are initially measured at fair value on the date the contract is entered into, and subsequently re-measured at fair value at the reporting date. Each derivative is carried as a financial asset when the fair value is positive and as a financial liability when the fair value is negative.
4	Debts owed to credit institutions	Overdrawn cash balances are shown as a liability.	The total cash balance is shown, any overdrawn accounts are not removed and shown separately.
5	Insurance Payables	Insurance payables relates to insurance creditors, measured at their carrying value as at the reporting date.	In the GAAP financial statements, the valuation basis is consistent with the Solvency II valuation principles and therefore, no valuation difference arises.
6	Reinsurance Payables	Insurance payables relates to reinsurance creditors, measured at their carrying value as at the reporting date.	In the Irish GAAP financial statements, the valuation basis is consistent with the Solvency II valuation principles and therefore, no valuation difference arises.
7	Trade Payables	Trade payables are measured at their carrying value as at the reporting date.	In the Irish GAAP financial statements, the valuation basis is consistent with the Solvency II valuation principles and therefore, no valuation difference arises.
8	Any other liabilities	Other liabilities are measured at their carrying value as at the reporting date.	In the Irish GAAP financial statements, the valuation basis is consistent with the Solvency II valuation principles and therefore, no valuation difference arises.

Refer to [Appendix 4](#) for the S.02.01.02 Solvency II Balance Sheet Template.

Material Contingent Liabilities

The company does not have any other material contingent liabilities and provisions other than technical provisions.

Employee Benefits

The company had the following employee benefit obligations as at 31 December 2023:

	2023 €'000	2022 €'000
Salaries Payable	3,916	3,451
Trade Union Subscriptions Payable	-	-
Pension Payable	203	18
Social Committee Fund	9	9
Holiday Pay Accrual	276	283
Total short-term employee benefit obligations	4,404	3,761

The company does not have any defined benefit plans and contributes only to defined contribution pension schemes.

D.4 Alternative Methods for Valuation

The company uses alternative valuation methods in accordance with Article 10 (5) when valuing a small portion of its investment assets. These alternative valuation methods include the following:

- **Quoted prices for identical or similar assets or liabilities in markets that are not active** – This method is applied to assets that have a quoted price but the asset is illiquid and does not trade often. The company can support the rationale for this valuation approach as the quoted prices applied are for assets with similar characteristics, for example, same instrument type, same credit rating and same ultimate guarantor.
- **Market- corroborated inputs, which may not be directly observable, but are based on or supported by observable market data** – This method is applied to assets such as our investment properties and real estate funds.
Market valuations are carried out each year on our investment properties by the property managing agents using the RICS (Royal Institute of Chartered Surveyors) Valuation – Professional Standards. Every three years a full red book valuation is carried out on each property. On an annual basis, desk-based valuations are carried out and valuation certificates are issued. The company can justify this valuation approach as it is independent and supported by observable market data.
With regards to our real estate funds, the fund managers carry out a desk-based valuation on a monthly basis. Again, the company can justify this valuation approach as it is independent and supported by observable market data.
- **Unobservable inputs reflecting the assumptions that market participants would use when pricing the asset or liability, including assumptions about risk** – This method is applied in cases where securities are in liquidation or carried at amortised cost.

The company assesses the adequacy of the use of the above methods on an annual basis through discussions with our investment custodian and external audit review.

E: Capital Management

E.1 Own Funds

The company has a simple capital structure made up of retained earnings only. As at 31 December 2023, the company's eligible amount of own funds to cover the SCR and MCR stood at €747.4 million (2022: €686.8 million) and was comprised entirely of Tier 1 Basic Own Funds. The company manages its capital requirements according to the Capital Management Policy and by assessing its required solvency margins on a regular basis. The Board review the capital structure of the company on an on-going basis to determine the appropriate level of capital required to pursue the business strategy.

The company uses the Solvency II Standard Formula to quantify risk in the business and its appropriateness is regularly assessed. The Standard Formula is also used to quantify the capital impact of key events and key management actions. It is also used to analyse the change in risk profile from one quarter to the next. The company assesses the significance with which the risk profile deviates from the key assumptions and parameters underlying the SCR. Conceptually, the company estimates Economic Capital from:

- Regulatory Capital.
- An allowance for deviations from Regulatory Capital.

- A consideration of non-quantified risks.

The assessment of Economic Capital also considers:

- Suitable margins above the SCR, as might be required by a target credit rating.
- Required capital for possible strategic initiatives.
- Resilience against certain stress scenarios.
- Recognition of the mutual status of the company and the challenges for capital raising.

The company's capital levels are consistent with the highest credit rating agency financial strength levels. The company has developed risk metrics to quantify the risks to which the business is exposed. A capital model is used to quantify the risks of the business taking into account diversification effects. This is done in the context of the company's Own Risk and Solvency Assessment ("ORSA"), which continues to evolve in parallel with the changing environment and industry best practice. The appropriateness of the capital model is regularly assessed. The company considers overall solvency needs including risks that are beyond the scope of the capital model. This is achieved using a range of sensitivity tests and scenario analysis that are undertaken on an annual basis and are assumed to apply over the business planning period of 3 years. The material risks of the business are subject to a wide range of stress tests in order to provide an adequate basis for the assessment of the overall solvency needs. Stress testing and related analysis are conducted in line with the ORSA Policy and the results of stress tests are contained in the Risk Report. The identified stresses are decided upon based on discussion with the relevant function manager. The company considers capital requirements and capital efficiency in the context of profitability, expenses and market position relative to peers.

The following table reconciles the difference (reconciliation reserve) between the equity in the financial statements and the basic own funds as calculated for Solvency II purposes.

	2023 €'000	2022 €'000
Total equity in the financial statements	673,215	604,568
Items not recognised in the financial statements		
Best estimate claims provisions	(459,039)	(430,365)
Best estimate premium provisions	(16,257)	(14,351)
Risk margin	(33,245)	(29,181)
Forseeable distribution		-
Deferred tax impact	(10,595)	(11,038)
Items not recognised in the Solvency II Balance Sheet		
GAAP claims reserves	452,250	441,173
Unearned premium reserves	22,988	20,264
ULAE	42,584	34,863
Bad debt	338	446
Claims & Premiums margin of uncertainty	77,846	78,061
Inclusion of retro premium as a future cashflow	(1,874)	(6,619)
Asset valuation differences	(826)	(984)
Basic Own Funds under Solvency II	747,385	686,838

None of the company's own funds are subject to transitional arrangements. The company has no ancillary own funds or subordinated debt. No deductions are applied to own funds and there are no material restrictions affecting their availability and transferability.

The following table provides explanations of the key elements of the reconciliation reserve shown above.

Key element of the reconciliation reserve	Explanation
Risk Margin	The risk margin is designed to ensure that the value of technical provisions is sufficient for another insurer to take over and meet the insurance obligations. It is calculated using a modified Solvency Capital Requirement as specified by EIOPA.
Foreseeable Distributions	The foreseeable distribution is shown as zero as at year-end due to the fact that proposed dividends have been included in Other Liabilities.
Deferred Tax Liability	For the company, the difference between the deferred tax asset in the financial statements and the deferred tax liability created under Solvency II pertains to the deferred tax on the changes in valuation in moving from Irish GAAP to Solvency II. That is, it is largely driven by the reduction in the (net) technical provisions under Solvency II. This would result in an instantaneous profit, which would incur corporation tax at 12.5%.
Unearned Premium Reserves / Best Estimate Premium Provisions	Under Irish GAAP, the company is required to hold a reserve for unearned exposure that is at least equal to the unearned premium. Under Solvency II the best estimate premium provisions is a discounted best estimate. This best estimate includes an allowance for future reinsurance premium and recoveries as Solvency II requires reinsurance to be recognised consistently with the boundary of the underlying insurance contract whereas Irish GAAP recognises reinsurance from inception of the contract.
Differences between IRISH GAAP liabilities and best estimate liabilities	In the Irish GAAP financial statements technical reserves are undiscounted, as compared with discounted Solvency II technical provisions.
Claims Margin of Uncertainty	Margins of uncertainty are included in the Irish GAAP financial statements. The margin of uncertainty is excluded from Solvency II technical provisions.
Asset Valuation Differences	Valuation differences relate to Property, Plant and Equipment (PPE) and Intangible Asset, both of which are valued at cost less accumulated depreciation in the Irish GAAP financial statements. The company's PPE relates to leasehold improvements and IT assets and its intangible asset relates to IT software. As neither can be sold separately, both are valued at zero under Solvency II valuation principles. The Right-of-Use Asset is not recognised under Irish GAAP while it is recognised at fair value under Solvency II. Provisions for MIBI are included in the Irish GAAP claims reserves but are included in "other provisions" under the Solvency II balance sheet. Retro-rated premium is held as under Insurance Receivables in the Irish GAAP balance sheet but is included in the Solvency II Technical Provisions as a future cash inflow.

E.2 Solvency Capital Requirement and Minimum Capital Requirement

As at 31 December 2023, the company had a solvency ratio of 3.1 times the SCR (2022: 3.1 times). The company's SCR and MCR were €239.5 million and €64.4 million respectively (2022: €224 million and €60.9 million respectively).

The following table shows the components of the SCR (using the Standard Formula) as at 31 December 2023.

	€'000 2023	€'000 2022
Market Risk analysed by the following sub-risk modules:	125,971	112,034
• Concentration Risk	163	6,951
• Interest-Rate Risk	27,799	16,030
• Currency Risk	4,319	4,327
• Equity Risk	78,368	66,525
• Property Risk	17,584	22,202
• Spread Risk	36,257	31,307
• Market Diversification Benefit	(38,519)	(35,308)
Non-Life Risk analysed by the following sub-risk modules:	169,660	160,374
• Premium and Reserve Risk	166,950	157,914
• Lapse Risk	-	-
• Catastrophe Risk	9,782	8,910
• Non-Life Diversification Benefit	(7,072)	(6,451)
Default Risk analysed by the following sub-risk modules:	12,795	12,401
• Type 1	11,303	10,349
• Type 2	1,907	2,579
• Default Diversification Benefit	(415)	(527)
Health Risk analysed by the following sub-risk modules:	1,047	1,011
• Premium and Reserve Risk	730	716
• Lapse Risk	-	-
• Catastrophe Risk	590	557
• Health Diversification Benefit	(273)	(262)

Basic Solvency Capital Requirements (“BSCR”) pre- Diversification	309,473	285,820
Overall Diversification Benefit	(67,494)	(61,864)
BSCR	241,979	223,956
Operational Risk	15,543	14,385
Loss Absorbing Capacity of Deferred Tax (LACDT)	(17,980)	(14,345)
SCR	239,541	223,995
MCR	64,367	60,945

The company uses EIOPA’s Solvency II Standard Formula. It does not use company-specific parameters in its computation; however, it uses one simplification in relation to the allocation of risk mitigation from the non-life and health modules across our reinsurer panel in the default type 1 calculation.

The LACDT is an adjustment that can be applied to the SCR as specified in Article 108 of the Solvency II Directive and corresponding Delegated Acts. This adjustment reflects the potential compensation of unexpected losses through a simultaneous change in deferred taxes.

Undertakings are required to consider the extent to which these deferred taxes are recoverable by assessing their sources of future taxable income.

For 2023, IPB considers its expected profits over its business planning horizon only, i.e. recovering losses over a 3-year timeframe.

As stated above, the Minimum Capital Requirement for the company at 31 December 2023 was €64.5 million (2022: €60.9 million) which represents the minimum calculated as per the Standard Formula.

E.3 Any use of the duration-based equity risk sub-module in the calculation of the Solvency Capital Requirement

The company has not opted to use the duration-based equity risk sub-module of the Solvency II regulations.

E.4 Internal model information

The company applies the standard formula model and does not use an internal model to calculate the Solvency Capital Requirement.

E.5 Non-compliance with the Minimum Capital Requirement and significant non-compliance with the Solvency Capital Requirement

There was no breach of the Solvency Capital Requirement (and hence the Minimum Capital Requirement) over the reporting period.

E.6 Any other information

Refer to the appendices for the templates as at 31 December 2023, relevant to this section. These include:

- [Appendix 5](#) S.23.01.01 Own Funds Template
- [Appendix 6](#) S.25.01.21 Solvency Capital Requirement – Standard Formula Only Template
- [Appendix 7](#) S.28.01.01 Minimum Capital Requirement – Only Life or Only Non-Life Template

Annex

Annual Quantitative Reporting Templates (QRTs)

The following templates are included in this section

QRT REF	QRT Template name
S.05.01	Premiums, claims and expenses
S.19.01	Non-Life Insurance claims
S.17.01	Technical Provisions
S.02.01	Balance Sheet
S.23.01	Own Funds
S.25.01	Solvency Capital Requirement - for undertakings on Standard Formula
S.28.01	Minimum Capital Requirement
